

EV Charging Point for Pandora at Castlemans Design and Access Statement

The application is to install a standard EV charging point on the wall of Pandora as indicated on the Site Plan.

The device is an Ohme Home Pro, to be installed at the standard height for such devices (approximately 1.5 m). The image below (from vendor's website) shows the device:

- The wall on which it is to be installed is a plain, single storey brick wall.
- On this wall there are already installed a white gas meter cupboard and a tap, so there is no impact on the visual heritage value.
- Pandora is listed only because it is attached to Castleman House.
- This wall is well away from any view of Castleman House.
- There is no public view of the site.

As can be seen from the Site Location and Site Plan drawings, any vehicle to be charged will be parked on our property, adjacent to the charging point. It is the location where we have parked our previous vehicles for over 30 years, so use of the charge point will not imply any other visual impact.
