APPRAISAL

Site Description:

Sussex Lodge is a Grade II Listed 19th century former farmhouse predominantly constructed of brick (laid in a Flemish Bond) under a steeply pitched hipped slate roof. The property is a rectangular plan made up of 2 storeys and an attic, with flanking chimneys. A brick painted string course separates the floors around the entire property.

The dwelling is set relatively centrally on the plot and is surrounded by tall, mature vegetation that visually encloses the property on all elevations.

Proposal Description:

This application seeks part-retrospective approval for the proposed conversion of the existing outbuilding (currently used for storage, historic stables and a boiler room) to habitable space in the form of a bedroom, hallway and open plan kitchen/diner/living room. This would be facilitated by a small single storey side extension, insertion of windows, and doors plus additional insulation and underfloor heating at ground floor

level.

Also included in the proposals are several internal alterations to the main dwelling, consisting of new door openings at ground and first floor level, replacement stairs to increase head height and the formation of a 'jack and jill' bathroom.

This application is a technical resubmission of applications 223175 & 223176, with its submission necessary to regularise several additional areas of unauthorised works completed since the consents were issued. A summary of the additional elements proposed under this application is below:

- Minor relocation of consented fenestration on the western elevation of the attached outbuilding.
- Minor increase in scale/height of the western single storey side extension's mono-pitch roof.
- Removal of door on eastern elevation of attached outbuilding, with the cavity infilled with brick walling.
- Repairs to existing external brickwork and re-pointing.
- Re-building of internal 'nibs' within the attached outbuilding.
- Part re-construction of the attached outbuilding's eastern elevation.
- Re-building and repair of internal walls.
- Installation of flinch plating to existing timber beams.
- Replacement and repair of rotten rafters and wall plates.
- Reconstruction of chimney in 'storage' room, plus installation of log burner flue within the chimney.
- Additional repairs and insulation measures within the 'storage' room (historic pantry).
- Creation of opening in rear garden boundary wall.

The proposal complies in terms of:

Impact on heritage asset:

The proposed single storey side extension would lean to and connect to the existing gable roof form of the outbuilding. It would abut the southern end of the building and would be finished with brickwork and slate tiles to match the host dwelling. Whilst the Built Heritage Officer has raised concerns regarding the extension's immediate proximity to the southern elevation of the outbuilding and the minor increase in height upon that approved under 223175 (approx. 0.12 metres), its modest scale would result in negligible harm to the setting of the Listed Building and does not warrant a reason for refusal.

Details submitted regarding the new fenestration and internal layout are however relatively basic and therefore, to ensure the designated heritage asset is not adversely harmed throughout the construction process, further details regarding all of them will be required prior to the commencement of the relevant development. These will be attached as conditions.

In terms of insulation, the proposed method for the main attached outbuilding was previously considered acceptable under applications 240099/240131. In comparison, further details are required for the 'storage' room (historic pantry) due to the changes in level between the attached outbuilding. These details will be secured via condition.

The conversion of the outbuilding to habitable space is considered acceptable in principle; New French doors and other openings/doors are proposed on both side (east and west) elevations and a number of internal walls would also be removed to create a more 'open plan' living area, plus the installation of insulation and underfloor heating. Based on the details submitted, it is considered that there would be no unacceptable harm to the setting of the Listed Building.

Underfloor heating is proposed across the whole ground floor. This would require the partial uplift of the existing historical paved flooring in the original kitchen which the Built Heritage Officer has no objection to. The applicant has provided an Underfloor Method Statement that was previously considered acceptable under applications 240099/240131 and therefore compliance with this statement will be secured via condition.

The existing staircase is also proposed to be replaced to ensure a taller head height within the dwelling. Elevational plans have been submitted regarding this which are considered acceptable. The Built Heritage Officer has requested a condition which requires details of the new staircase's enclosure in the second-floor attic room prior to the commencement of development but the Case Officer does not consider this to be necessary to make the scheme acceptable.

One additional doorway into two of the first-floor bedrooms is proposed. No objections are raised to its construction providing details of the finish/joinery are submitted to the Local Planning Authority. This will be attached as a condition.

The chimney within the storage (pantry) room is proposed to be re-built, with a log burner flue installed within the existing cavity. Subject to a method statement for the re-building of the chimney and further details on the proposed log burner flue, there are no objections to this element of the proposals.

Several elements of repair works to existing rotten timbers are proposed, as well as the re-enforcement of existing timber beams with steel flinch plates. Such measures are welcomed in that they ensure the long-term survival of the building, but details of their construction are limited. To ensure these works do not harm the Listed Building as a Heritage Asset, further details will be secured via condition.

On the eastern elevation of the attached outbuilding, a large area of the existing brick walling has been demolished and re-built without authorisation, including the infilling of a previous door opening. There are no adverse objections to this approach, however the works completed thus far do not respect the historic fabric of the dwelling, in that the brick patterns and mortar mix are considered inappropriate. As such, a method statement for the re-building of this wall will be secured via condition.

The proposed log cabin is sited in the south-eastern corner of the dwelling's garden. It has a footprint of 3.7 x 5 metres and has an L-shaped form, with a traditional gable roof. The building is used on an incidental basis and includes gym equipment and miscellaneous garden tools within. The log cabin is consciously sited a legible distance away from the main dwelling and is modest in form and as such, it would not have any adverse impacts on the setting of Sussex Lodge as a Grade II Listed Building.

A small opening is proposed within the garden's southern boundary wall to provide access through the site. The WBC Built Heritage Officer has no objections to this element of the proposals.

Overall, the WBC Built Heritage Officer concludes that the proposed development would result in 'less than substantial harm' to the setting of Sussex Lodge as a Listed Building. Paragraph 215 of the NPPF states that where a development proposal will lead to less than substantial harm to the significance of a designated heritage asset, this harm should be weighed against the public benefits of the proposal including, where appropriate, securing its optimum viable use. In this regard, the public benefits of the proposals are the intention of returning Sussex Lodge as a Designated Heritage Asset back into its optimum viable use as a dwellinghouse. The less than substantial harm caused by the proposed development, subject to conditions, would be outweighed by the public benefits of the development.

It is important, due to the part-retrospective nature of the development, to impose time-sensitive triggers on the conditions that require further information.

Other Works:

It is noted that the conversion of the attic room to a 'bedroom' indicates no changes to the fabric of the Listed Building. It is clear from photos of the house that repairs, insulation and other works would be required to make this room habitable, works which would need further permission and a bat survey that assesses the site as a whole.

Furthermore, if further changes to the proposals are required to comply with certain Building Regulations post permission, the applicant will likely be required to either seek variations to this permission or apply for a new consent altogether. An informative will be included regarding this on the decision notice.

Conclusion:

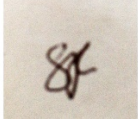

In summary, subject to conditions, the proposed development is considered to comply with the Development Plan and would not cause adverse harm to the setting of Sussex Lodge as a Designated Heritage Asset. The application is therefore recommended for approval.

The Public Sector Equality Duty (Equality Act 2010):

In determining this application the Council is required to have due regard to its obligations under the Equality Act 2010. The key equalities protected characteristics include age, disability, gender, gender reassignment, marriage and civil partnership, pregnancy and maternity, race, religion or belief. There is no indication or evidence (including from consultation on the application) that persons with protected characteristics as identified by the Act have or will have different needs, experiences, issues and priorities in relation to this particular planning application and there would be no significant adverse impacts as a result of the development.
