Building Regulation Notes:

N - Glazing - Safety in Relation to Impact, Opening and Cleaning:

- Impact - all glazing in critical locations (as defined in diagram 1 of Part N1) will satisfy the requirements of Class C of BS 6206.
- Manifestation - glazed doors and screens will have 'substantial frames' and intermediate mullions or transoms to break up the glazed area.
- Controls for opening and closing windows will be no greater than 1.9 metres above floor level. Roof windows will be operated manually by a pole supplied by the window manufacturer.
- All windows can be cleaned from ground level. Roof windows are reversable for cleaning external surfaces from the inside using telescopic cleaning equipment.

P - Electrical Safety:

- The design, installation, testing, and certification of the electrical system is to be carried out in accordance with the requirements of BS 7671, the IEE 16th edition Wiring Guidance & Building Regulation Part P (electrical safety) by a person registered under the elctrical self-certification scheme authorised by the Secretary of State.
- Refer to building regulation notes L1B for details of light fittings to be provided.
