COMMENTS:

I am shocked to see that this site is being considered for fuel oil storage any distribution centre. The location is right next to a country park (which floods over the winter months) - concerns about pollution and leaking of oil into the country lakes.

The road network is also not suitable for large tankers to be travelling along and turning/pulling out of this site. The road/pathways are often used by school age children to get to school on foot and by bike as well as commuters travelling to the station. Huge tankers using these roads (which were not built for such large vehicles) is a real danger and concern both to pedestrian and other road users.
