Nuclear Emergency Plan (Construction Phase)

Construction Site Address:

Campus & Co | Reading

Shinfield Court, Church Lane, Three Mile Cross, Reading, RG7 1HB

Version:	V.4
Date:	02/05/24
Prepared By:	Lewis Tennent
Position:	Director
Next Revision:	October 2024

Introduction

This document relates to the construction phase (only) of the 'Campus & Co | Reading' store, located at: Shinfield Court, Church Lane, Three Mile Cross, Reading, RG7 1HB.

The premises fall within the 'Detailed Emergency Planning Zone' (DEPZ) around the Atomic Weapon Establishment (AWE) located at Burghfield, which has radioactive material.

What could happen at AWE?

According to AWE, there is no risk of a Chernobyl or Fukushima nuclear reactor type incident since there are no reactors on site. However, should a significant accident result in an uncontrolled fire or explosion in a building where radioactive materials are being handled, there is a possibility that it could lead to the release of radioactive particles into the environment. If such an event were to take place, a radiation emergency may be declared.

In the event of a radiation emergency being declared, people in the area around the affected AWE site could be exposed to radioactive particles which have been carried downwind in a 'plume'. The exact direction and extent of any plume will depend on the weather conditions at the time. This means that the amount of ionising radiation someone may be exposed to after an accident will vary considerably. This depends on how much radioactive material is released and the weather conditions at the time, including whether they are downwind of the affected location and the strength of the wind.

Recovery	8

Aim & Objective:

The aim and objective of this plan is to provide detailed information on what to do in the event of an emergency situation at AWE, and to ensure appropriate arrangements are in place of the unlikely event of a radiation emergency. This plan applies to the construction phase only of the premises.

Distribution & Training:

The plan will be distributed to all contractors working on the site. It will form part of the site safety induction for construction workers.

A hard copy of the plan will be readily available in the site office at all times, with other health & safety information.

Management of the Plan:

The plan will be reviewed and revised as necessary on the following basis:

- (a) The plan will remain under continual review and will be updated as necessary as details change. It will however undergo a full formal review within 1 month of work commencing on-site.
- (b) Following any major incident or near incident at AWE
- (c) Following any change of advice from AWE/ Wokingham Borough Council

The following persons are responsible for the monitoring, review and activation of the Plan.

Role:	Name:	Telephone:
Project Director	Lewis Tennent	07469 037302
Compliance Director	Jeff Silcock	07825981140

How will I know there is an emergency?

Who on-site will be notified:

The construction site manager will be the person most likely to receive the alert via the landline phone, and will be responsible for coordinating the immediate response on-site and alerting everyone on the premises.

Other ways you may be alerted:

Local radio and TV stations will broadcast messages, and emergency responders will use news websites and social media to issue advice to the public. Other alerting systems may also be used such as the Government's Emergency Alerts.

Please follow the advice IMMEDIATELY

Local radio and TV stations to tune	
Heart Berkshire	97.0, (Reading) and 102.9 MHz (Basingstoke and Whitechurch) MHz. DAB: 12D (Reading and Basingstoke) <i>Broadcast area: Berkshire and north Hampshire</i>
BBC Radio Berkshire	Frequency: 94.6 MHz, 95.4 MHz, 104.1 MHz, 104.4 MHz; DAB: 12D; Freeview: 719 <i>Broadcast area: Berkshire, northern Hampshire, parts of Buckinghamshire and parts of southern Oxfordshire</i>
Greatest Hits Radio Berkshire & North Hampshire	107.6 MHz FM
BBC Radio Solent (Hampshire)	96.1 and 103.8 MHz FM
BBC South	
ITV Meridian	

What to do in an emergency:

- 1. You should go into the site welfare building, and stay there.**

This is because contamination levels are likely to be higher outside buildings than inside. Staying inside is the most important advice because the fabric of the building will provide a layer of protection against any ionising radiation and will reduce exposure to any radioactive particles.

- 2. If you are outside and in the downwind area, as advised by the emergency services, at the time of the incident, you may benefit from decontaminating yourself.**

Take off your outer layer of clothing can remove up to 90% of radioactive material. Wash your face, and other exposed body parts at a sink or tap.

- 3. As a precautionary measure, everyone within the DEPZ area will be advised to shelter in the initial response stages of a radiation emergency. Sheltering may be necessary for up to 48 hours.**
- 4. Close all windows and doors** to stop radioactive particles from entering the building
- 5. Turn off air-conditioning units using the remote controller directly under or next to each unit.** These may draw air in from outside so should be shut down to minimise the risk of particles entering the building
- 6. Observe news websites or listen to local radio** for instructions/updates. During an emergency, updates will be broadcast regularly.
- 7. Do not make phone calls by landline or mobile, or use mobile data.** This is important because the phone system could be overloaded, preventing the emergency services and other responders from receiving or making calls, or from contacting you. You can still call 999 in an emergency.
- 8. Stay where you are.** The main risk at AWE is from Alpha radiation, which is why you will be safer to stay where you are rather than travelling around outside; vehicles provide less protection against ionising radiation than houses and other solid buildings. If you try to leave the area, roads could quickly become gridlocked and prevent access for emergency services. By leaving, you could also end up in an area with more radioactive contamination. It is very unlikely that an evacuation would be necessary but, if that does happen, details of what to do will be given.

Notice to be displayed on-site.**What to do in the event of a
radiation emergency at an AWE site**

**IF you get a call or find out that there is a radiation
emergency about AWE, then follow the steps below:**

	Go in	Go indoors and follow the advice below.
	Stay in	Close and stay away from all windows and doors. Damp down or put out fires and turn off any fans that could draw in air from outside. If you are not at home, go into the nearest permanent building and take off your outer layer of clothing, wash your hands, face, and other exposed body parts.
	Tune in	Tune in to local radio and TV. Advice and updates will also be given on news websites and social media.
	Don't use your phone	Don't use your landline or mobile unless there is a separate emergency. This could overload the system and should be left clear for the emergency services.
	Don't leave the area	Don't leave the area unless told to do so by the emergency services. You will be much safer indoors.

Provision for Sheltering

A landline will be connected to the site welfare building, which will be able to receive emergency alerts. There will also be a wired broadband connection to the premises.

Construction Works should shelter inside the on-site welfare building. Food and drink inside will be unaffected, as well as the mains water supply. There will always be a first-aid kit, containing basic medicines on-site.

The site office/welfare unit will have an emergency kit with provisions sufficient for at least 48hrs, which can be used for those sheltering.

This will include:

- Bottled water
- Emergency sleeping bags
- Sanitising wipes
- FFP2 Disposable respirator masks
- Packaged foods
- Phone charging cables
- Foil blankets

The maximum number of persons on a given day will typically be:

Construction Workers	6
----------------------	---

Support for those Sheltering

The premises will have a reliable wired broadband connection, enabling those sheltering to access the internet to receive live updates on the situation, without putting pressure on the mobile network. It will also have a landline connection. Anyone sheltering will be able to connect to the Wifi in the building.

Preparations in advance of any incident:

Every worker/visitor on-site will need to sign in upon arrival to the site as per Health & Safety regulations, which will include writing their mobile number. This means there will be a register of all persons on-site with contact numbers, located on the sign-in desk in the welfare building.

The contractors employing the site works will have records of their details including next of kin, and the site manager will be responsible for liaising with the main contractor to obtain details as appropriate.

A register of key agencies and their contact details will be kept on the noticeboard in the welfare building, and this will be maintained by both the site manager and the appointed site health & safety consultant/ competent person. A weekly check of the emergency kit will be conducted and recorded by the site manager to ensure everything is in place.

Evacuation:

You should not evacuate unless you are told to do so. Normally, the safest place for you is in the site welfare building, which may be for several days depending on the situation.

However, if you need to be evacuated urgently from the area, you will be told how this will be done, where to go and what you need to do by the emergency responders.

The site will have adequate access and turning space for emergency vehicles should evacuation become necessary.

Recovery:

Following an emergency, we will liaise with Wokingham Borough Council, the emergency services, our insurers and Contractors to assess action we need to take to make it safe to continue work on-site.

We will engage professional decontamination experts if advised, to thoroughly decontaminate the area to ensure the future safety of anyone working at or visiting the site. We will also replace all air-conditioning filters, venting systems and anything else that has been exposed to and/or could contain radioactive particles, but can't be decontaminated.
