COMMENTS:

I can think of no worse place to store 873,000 litres of fuel and to pump all treated sewage & site runoff into the River Loddon, as proposed. It is in the middle of a designated flood zone 3, right between 2 areas that are designated wildlife areas in a country park. It is an environmental disaster waiting to happen to the Loddon River and downstream tributaries, a risk to wildlife in a designated reserve area and a risk to the public who use the wildlife reserve for walking, birdwatching and fishing
