COMMENTS:

Having been a member of the fishing club directly next to this proposed site for a number of years, knowing the area and the potential hazards this could create, I am shocked at how this site is even being considered! It would be an ecological disaster should any spills or leakages find its way into the water course, ie lakes and river causing possible irreversible harm to the environment and the thousands of fish, mammals, reptiles, amphibians etc that live around the waters edge. Surely there is a site better suited than this natural area of flora and fauna
