COMMENTS:

I'd like to preface the comment by saying that this is not an outright objection to the proposition, just a request regarding the material planning considerations. There was no option for this kind of request so I just had to pick Object.
Could you please take extra care not to push our garden fence with excess soil when reworking your garden as this eventually causes the fence to tilt and break. Previous garden fence work has tilted our fence before so I feel as though it could happen again.
