Hi Gareth,

As discussed from our site meeting the other week, there are a number of trees on your property that are of concern in relation to our high voltage and low voltage networks.

It is imperative that we cut these trees back to ensure public safety and supply are maintained.

Please see attached map in reference to the proposals below;

- T1 – Willow. Remove to ground level
- T2 – Willow. Side prune to gain a clearance of approx. 2-3m from network.
- T3 – Oak. Prune to gain a clearance of approx. 2m from network.
- T4 – Acer. Prune to gain a clearance of approx. 2m from network.
- T5 – Leylandii. Remove to ground level.
- T6 – Leylandii. Side prune to gain a clearance of approx. 2m from network.
- T7 – Leylandii. Side prune to gain a clearance of approx. 2m from network.

If agreed, we can book in at the earliest convenience.

Kind regards,

Cairon.

Cairon May
