1 INTRODUCTION

- 1.1 This Tree Survey and Arboricultural Impact Assessment has been prepared by RPS on behalf of Barratt Homes Southern Counties in respect of the development at Hogwood Garden Village, Finchampstead, Wokingham, RG40 4RF.
- 1.2 This report includes specific Method Statement elements where they relate to this proposed scheme.
- 1.3 This report refers to Parcels 8, of the overall Hogwood Farm development scheme. This parcel is located on the northern section of the overall development site. Please refer to separate AIAs relating to Parcel 9 and Parcel 7 independently, and as included in separate RM applications.
- 1.4 The purpose of this report is to: -
- Assess the landscape and visual amenity value of the existing trees and to identify the constraints associated with the trees prior to any potential redevelopment of the site. An assessment of the quality of the trees has been made, with reference to the categories and sub-categories listed within Table 1 - BS5837:2012¹.
 - Assess and quantify the arboricultural impact of proposed development within the survey area, based on indicative layout proposals provided by the client.
 - Provide additional arboricultural information and advice in relation to the protection of trees throughout the development of the site.
 - Provide a Tree Protection and Removal Plan to detail the proposed protective measures to be taken in respect of the trees during development of the site.
- 1.5 The Tree Protection and Removal Plan identifies the following:
- Trees to be retained;
 - Trees requiring removal;
 - Alignment and design of protective fence;
 - Root Protection Area (RPA) of trees.
- 1.6 This report was authored by Alice Brown of RPS and authorised by David Cox, a professional member of the Arboricultural Association and Chartered Landscape Architect of RPS Group.

2 SUMMARY OF TREE SURVEY FINDINGS

- 2.1 A tree survey of the application site was carried out by RPS in accordance with the requirements set out in BS5837: 2012 'Trees in relation to design, demolition and construction – Recommendations'¹.

Methodology

- 2.2 The tree survey involved a visual inspection from the ground of individual specimens and groups of trees in order to record their amenity value, management recommendations and dimensions. Where observed, the general condition of the trees has been noted.
- 2.3 Trees were not climbed or inspected below ground level and inaccessible trees will have best estimates made about the location, physical dimensions and characteristics.
- 2.4 Tree characteristics recorded during the survey are detailed in table 1 in this document.

Limitations

- 2.5 The findings of this survey are not valid following adverse or unpredictable weather conditions or for any failure due to 'force majeure' or unpredictable events.
- 2.6 Trees were not climbed or inspected below ground level and inaccessible trees will have best estimates made about the location, physical dimensions and characteristics.
- 2.7 Trees and woody vegetation were not assessed for their potential impact upon future construction issues such as foundation designs (i.e.: NHBC chapter 4.2²). Whilst this report may assist in assessing likely future impacts, it should not be classed as a comprehensive vegetation survey in relation to impact upon future designs.

Site Description

- 2.8 The survey covered a parcel of land comprising a number of fields to the west, south and south-east of Hogwood Industrial Estate, Wokingham, RG40 4RF. The survey site is roughly centred on OS grid reference SU769643.
- 2.9 Wokingham is located within Berkshire in the south-east of England. The soilscape of the area in which the survey site is situated typically consists of 'slowly permeable, seasonally wet, slightly acid but base-rich loamy and clayey soils'³.
- 2.10 The survey site comprises a number of fields of mixed agricultural uses, compartmentalised by internal boundary hedges, trees and patches of woodland. The land within Hogwood House, the residential property within the site boundary, and the south-westernmost part of Hogwood Industrial Estate were also included within the survey. The remainder of Hogwood Industrial Estate lies to the north of the survey site, outside of the survey boundary. Park Lane circumnavigates the north-east through to the south of the site. The A327 (Reading Rd) is adjacent to the western border, whilst Sheerlands Road is adjacent to the north-west.
- 2.11 The wider environs of the site largely comprise mixed use agricultural land with dispersed settlements and occasional areas of woodland. At the time of authoring this report, the phase 1 development works are partially complete but still under construction..

Surveyed trees

- 2.12 In general, the tree cover on the Hogwood site comprised mainly native broadleaf species. This was dominated by pedunculate oak, many of which were identified as category 'A' (after BS5837: 2012¹), located throughout the site. The wider survey also recorded high numbers of ash and field

maple of moderate to high amenity value which with other native species such as holly, cherry, birch, alder, hawthorn and blackthorn, complimented the climax oak canopy character of the site.

- 2.13 Generally, within the wider site, trees with high collective value were concentrated in the woodland pockets between fields and at the site peripheries. Several of these woodlands were designated as ancient woodlands³, although trees at the periphery of internal woodland pockets were often of lower individual value. Elsewhere, internal hedgerows often comprised dense understoreys of pioneer species of low aesthetic value, but with some wildlife value, and occasional prominent mature trees of high value, likely remnant border trees.
- 2.14 Within this survey area, the most significant trees on site were the large Climax Oaks forming the south-western boundary of W7.

Planning considerations

Generally

- 2.15 New tree planting opportunities should be considered as part of any potential redevelopment; this will help to broaden the age diversity and arboricultural interest of the tree cover within the area. Sufficient space should be provided for species with significant stature to grow out into maturity.
- 2.16 Under the UK planning system, local authorities have a statutory duty to consider the protection and planting of trees when granting planning permission for proposed development. The potential effect of development on trees, whether statutorily protected (e.g. by a tree preservation order or by their inclusion within a conservation area) or not, is a material consideration that is taken into account in dealing with planning applications.
- 2.17 Trees can offer many benefits, including the provision of visual amenity, softening or complementing the effect of the built environment, and adding maturity to new developments by making places more comfortable in tangible ways e.g. contributing screening and shade, reducing wind speed and turbulence, intercepting snow and rainfall, and reducing glare.

Veteran Trees

- 2.18 The wider Hogwood tree survey identified five large oaks of great stature (e.g. T47, T313, T445, T448 and T580), These may be classified as veteran trees by fulfilling the BS criteria of “... *features of biological, cultural or aesthetic value that are characteristic of, but not exclusive to, individuals surviving beyond the typical age range for the species concerned*”¹.
- 2.19 In recognition of this and given the abundance of potential wildlife habitats associated with veteran trees, these trees should be managed and conserved to maximise their habitat value and life span.
- 2.20 Veteran tree management should accord with the current environmental legislation, primarily the Wildlife and Countryside Act 1981 and publications such as “*Ancient and Other Veteran Trees: Further Guidance on Management*”⁴. Reference should be made to advances in environmental arboriculture for example coronet-cuts, natural fracture techniques and deadwood management many of which are demonstrated in BS3998:2010 “*Tree Works Recommendations*”⁵.
- 2.21 No veteran trees lie directly within the scope of this application.

Tree Preservation Orders

- 2.22 A desktop investigation into the planning constraints on this site using the Wokingham District Council web map confirmed that there are several Tree Preservation Orders (TPOs) in place on the site. These orders have been plotted on the tree survey plan with the respective TPO reference and date. There are four types of TPO, although any one order can contain any number of items which can be of one or more types which are as follows:

- Individual orders (each tree T1, T2 etc.);
- by reference to an area (the boundary of each area A1, A2 etc indicated on the plan);
- in groups (each group G1, G2 etc.);
- as woodlands (the boundary of each woodland W1, W2 etc.).

2.23 'Individual' orders are applied to trees if they merit protection in their own right.

2.24 An 'Area' orders apply to all the trees that were in existence at the time the order was made and best estimates may be made about the age of the trees to determine whether or not they are protected by the TPO.

2.25 A 'Group' order is applied to a group of individual trees which, together, make up a feature of amenity value but which separately might not.

2.26 A 'Woodland' order protects trees which are planted or grow naturally within the woodland area after the TPO is made regardless of how old they are. The order will protect trees and saplings of any size in the specified area, including those planted or grown after the order was issued.

2.27 Trees covered by a Tree Preservation Order are protected under the Town and Country Planning Act 1990 (Trees Regulation 2012) and the local authority must be consulted and permission sought for any works that may affect them.

Ancient Woodland

2.28 A desktop investigation of the site and its environs using the Magic Map application confirmed that there are a number of wooded areas within and closely bounding the wider Hogwood farm site designated as Ancient and Semi Natural Woodlands.

2.29 Our Ancient and Native Woodlands are one of our oldest land uses and most diverse ecosystems. They have often taken hundreds if not thousands of years to evolve, and in the case of Ancient Woodland are irreplaceable.

2.30 In its strictest sense, Ancient Semi Natural Woodland (ASNW) is composed of native tree species that have not obviously been planted; features of Ancient Woodland often survive in many of these woods as well, including characteristic wildlife and structures of archaeological interest. Natural England (English Nature) 4 defines Ancient Woodland as:

'An area that has been wooded continuously since at least 1600 AD. Ancient woodland is divided into ancient semi-natural woodland and plantations on ancient woodland sites. Both types of stand are classed as ancient woods.'

2.31 Provisions for the protection of Ancient Woodland are set out in section 15 paragraph 175 of the National Planning Policy Framework⁶ and the Forestry Commission and Natural England produced Standing Advice for Ancient Woodland (Natural England and Forestry Commission (2015) Standing Advice for Ancient Woodland⁷). The publication provides advice to planning authorities as set out:

'Ancient woodland is an irreplaceable resource of great importance for its wildlife, soils, recreation, cultural value, history and the contribution it makes to our diverse landscapes. It is a scarce resource, covering only 3% of England's land area. Local authorities have a vital role in ensuring the protection and conservation of ancient woodland and veteran trees, in particular through the planning system.'

2.32 The publication provides advice to planning authorities and states that development must be kept as far as possible from Ancient Woodland, with a buffer area maintained between the Ancient Woodland and any development boundary. An appropriate buffer area to the Ancient Woodland will depend on the local circumstances and the type of development, however, as mitigation local

planning authorities often require a 15m buffer around the affected Ancient Woodland, but larger buffers may be required.

- 2.33 It can be noted that there is an ancient woodland located towards the north-east of parcel 8, which is relevant to this application.

Design and Site Layout Considerations

- 2.34 Particular care is needed regarding the retention of large, mature trees which become enclosed within the new development. Where such trees are retained, adequate space should be allowed for their long-term physical retention and future maintenance.
- 2.35 A tree constraints plan defines the Root Protection Area (RPA) for each tree shown as a circle. This area may be adjusted should physical constraints or topographical features limit root activity in a particular area, however the total area should remain the same. Prior to any adjustment of the tree's RPA zones the changes should be assessed by an arboriculturist. During any site planning exercises the current and future growth potential of the trees should be considered.
- 2.36 The RPA for single stem trees broadly equates to a radius 12 times the stem diameter of the tree at 1.5m above ground level or the extent of canopy spread, whichever is the greater. For multi-stemmed, low branching trees or those with trunks with an irregular girth the point of stem diameter measurement is adjusted in consideration of these factors and in accordance with the illustrations in BS5837:2012 (Annex C).
- 2.37 The RPA should become an exclusion zone during construction works and for any development. It should be fenced-off and protected in accordance with BS5837:2012. The canopy is likewise susceptible to damage during construction work and requires similar protection.
- 2.38 No activities that result in excavations, changes in level or soil compaction should take place within the RPA of any retained trees, especially older mature trees. This would include the storage of materials, any construction work, trafficking by vehicles or even excessive trafficking by pedestrians.
- 2.39 If some form of construction has to take place within the RPA then certain measures need to be adopted to avoid disturbance or damage to the roots and to maintain moisture infiltration and gaseous diffusion into the soil.
- 2.40 Services likewise should be routed outside the existing or potential root zone of trees. Where it is unavoidable, then certain measures should be employed to avoid damage to the trees larger roots.
- 2.41 The location and siting of new facilities near trees should consider the potential impact on and conflict with both tree roots and canopy. This should take into account the ultimate size of existing young and middle-aged trees at maturity. Conversely the impact of the tree on the activities should also be considered with regard to obstruction, shading, leaf fall and root action. These are problems that can be managed provided sufficient space is allowed for.

Trees and Management of Health and Safety

- 2.42 It is recommended that a programme of periodic arboricultural assessments be undertaken in order to regularly assess the full health and safety of all trees both in full leaf and bare stemmed. The assessments should prioritise areas based on levels of access and presence of target (i.e. exposure of people to hazard) and accord with arboricultural advice, taking account of relevant factors (where known) that affect safety such as the age class, condition, size and species of the trees.
- 2.43 In particular, trees which are reaching their latter age stages, even if seemingly young trees when compared to longer living species (such as Oak). An example of this might be the hybrid Poplar which lie close to this application area. Many of these trees are in a state of collapse or have collapsed leading to individual branch or wholesale tree failure. The prevention of large-scale failure is preferred, therefore tree management in the form of coppice or pollard tree work will likely extend the trees arboreal and habitat value.

3 ARBORICULTURAL IMPACT ASSESSMENT

Introduction

- 3.1 Trees have finite energy reserves, developed each year throughout the growing season, which are utilised for biological processes such as growth and defence against pests or diseases throughout the following year.
- 3.2 Any development in proximity to trees has the potential to cause harm to those trees unless control measures are identified and acted upon; as such it is essential to consider the relationship between the proposed development and the retained trees to identify what precautions are necessary, proportionate, and appropriate.
- 3.3 Damage that is not immediately evident, but which can cause long term harm to retained trees includes things such as damage to the soil structure by compaction causing root damage and levels changes altering the water table and affecting moisture availability. To minimise the potential for harm to occur to retained trees all works must be carried out with regard to the Tree Protection measures detailed within this report.
- 3.4 In general, it can be seen that, by adopting appropriate methods of working, precautionary and protective measures, significant harm to retained trees can be avoided. In particular the establishment of a Construction Exclusion Zone (CEZ) by erection of Tree Protection Fencing will minimise the potential for harm to occur to retained trees.

Brief Description of Proposed Development

- 3.5 This document supports the planning application for the development of Parcel 8 of the wider Hogwood development.

Tree and Hedge Removal

- 3.6 Based on the road layout plan, the following quantities of trees, tree groups and hedgerows will require removal in order to facilitate the development proposals (based on proposals within the parcels 8 and 9 boundary only);
- Trees:
 - i. 6no. category C trees (T110, T111, T291, T292, T316 & T317)
 - Hedgerows:
 - i. 1no. category C hedgerow will require removal (H7)
- 3.7 To mitigate the loss of these trees, this scheme proposes much new tree planting which will add amenity to the area.
- 3.8 The attached Tree Protection & Removal Plan 4360-PLN-8-710 (Appendix B) indicates the trees and vegetation to be removed/ partially removed.

Future & Restorative Planting

- 3.9 Any future tree planting associated with the landscaping proposals for the site should be undertaken in accordance with the guidelines detailed in BS8545 Young Trees: From Nursery to Independence in the Landscape⁸.

Works Affecting Existing Crown Spread

- 3.10 Where tree canopies overlap with the proposed development and construction access routes, the following specific tree works will be required: -

- 3.11 Given trees are subject to constant change, a detailed assessment of any required pruning works should be undertaken by the Site Manager prior to the commencement of the development.

Proposed works within the Root Protection Area (RPA)

- 3.12 Root Protection Areas for each tree, group of trees and hedgerows surveyed have been determined in accordance with BS5837:2012¹.
- 3.13 Following the removal of identified trees and hedgerow and the erection of tree protection fencing as shown in the Tree Protection Plan, the majority of works will take place outside of the RPAs of retained trees.
- 3.14 However, where the proposed development overlaps with the RPA of T113(1.5%), excavation is to be completed by hand.
- 3.15 Construction activities have the potential to disturb the root system, and this must be monitored and carefully managed in accordance with the checklist in the appendix of this document.
- 3.16 Surface area protection will also be installed in accordance with Section 6. 2. 3 BS 5837: 2012 where the construction access routes overlap with the RPAs of retained trees.

4 TREE WORKS

Standard of Work

- 4.1 All tree work shall be carried out by suitably qualified, competent and insured arboricultural contractors in accordance with BS 3998:2010⁵ Tree Work and latest arboricultural best practice.
- 4.2 The works shall be carried out in accordance with:
- (a) The purposes of the stated objectives;
 - (b) Current British Standard with particular reference to:
 - BS 3998:2010 Recommendations for tree work
 - Forestry and arboricultural safety and training council safety guidelines (AFAG).
 - (c) 'Wildlife and Countryside Act 1981 (as amended)' and 'Conservation of Habitats and Species Regulations 2017'.
- 4.3 The contractor shall ensure that all property and utilities are protected against accidental or negligent damage that may occur. Any damage incurred by the contractor in carrying out their duties is to be made safe immediately and repaired to the satisfaction of the client or Utilities Company at the earliest convenient time, or as agreed, at the cost of the contractor.
- 4.4 Should any tree protection issues arise suitable measures should be put in place to remedy the protection to trees. Notifying an arboriculturist for further advice, and/or the LPA tree officer would be recommended.
- 4.5 Prior to the commencement of any tree works an appropriate risk assessment shall be produced to describe the measures required to fulfil the statutory safety obligations. It shall aim to identify and prioritise the necessary control measures and precautions.

Timing of Works

- 4.6 All tree works and tree protection works shall be completed prior to commencement of any construction works on the site.
- 4.7 All works shall be timed to have regard to the phenological cycles of protected species that are associated with trees; notably birds and bats.
- 4.8 Selective pruning shall be undertaken with regard to the phenological cycle of trees, i.e. when energy reserves are highest; generally observed to be late winter before budburst (optimal), or mid-summer before leaf drop, dependent on species.
- 4.9 Nesting birds are protected by law and any removal / tree works should not be carried out during the bird nesting season (March-August inclusive). Should any vegetation be outlined for removal during this period, then an ecological inspection would be required to check that no nesting birds are present. Should checks reveal nesting birds the vegetation must remain until September or until an ecologist has certified that the fledglings have left the nest.

Standard of Work and Environmental Sensitivity

- 4.10 All green and woody waste generated by the tree works shall be removed from site and disposed of in an environmentally sustainable manner.
- 4.11 When a branch is removed at its point of attachment, injury of the wood and bark of the parent stem or branch above the cut shall be avoided. If a branch collar is visible, the final cut shall be just outside it and care shall be taken to avoid tearing retained wood and bark when the cut is made. Preliminary cuts shall be made, if necessary, so as to remove weight, before a final cut is made. Care shall be taken to prevent falling branches from harming other parts of the tree (including its roots), its surroundings, people or property. Heavy branches shall be removed in sections and, where necessary, shall be lowered with ropes.
- 4.12 Works must be carried out in accordance with EA PPG6 and PPG5 in order to avoid the contamination of woodland ditches or drains.
- 4.13 The presence of any new badger setts must be checked for and identified prior to the commencement of any works.

5 TREE PROTECTION MEASURES

Construction Exclusion Zone

- 5.1 The Construction Exclusion Zone (CEZ) will be defined by the protective fence line. This zone shall not be disturbed and the protective fencing shall not be moved or taken down at any time.
- 5.2 Within the Construction Exclusion Zone there must be no mechanical digging or scraping, no alteration to existing ground levels including soil stripping, no earthworks, no handling or discharge of any chemical substance, concrete washings or of any fuels.
- 5.3 Furthermore, vehicular or pedestrian access and the storage of any materials is prohibited within the Construction Exclusion Zone.
- 5.4 Additionally, no materials that may contaminate the soil such as concrete mixings, diesel oil and vehicle washings shall be discharged within 10m of the stem of any tree and no fires shall be lit within 10m of the maximum extent of a trees crown.

Tree Protection Requirements

- 5.5 It is anticipated that the construction phase site-hoarding will directly bound the construction works separating the development area from retained trees preventing direct incursion.
- 5.6 Depending on the form and alignment of the construction site hoarding it may be necessary to extend the tree protective fence beyond that shown on the Tree Protection Plan to ensure adequate protection of retained trees – this must follow the location and extent of tree fencing shown on the plan.
- 5.7 Further details of the proposed fencing system to be utilised are attached at Appendix C. The Tree Protection Barrier examples, contained within Appendix C, are compliant with BS5837:2012 and an accepted industry standard.
- 5.8 Where site circumstances and associated risk of damaging incursion into the RPA do not necessitate the default fencing specification (Figure 2, Appendix C), an alternative specification should be prepared by the arboricultural consultant and approved by the local planning authority. For example, 2m tall, welded mesh panels on rubber or concrete feet. In such cases, the fence panels should be joined together using the minimum of 2 anti-tamper couplers, installed so that they can only be removed from inside the fence. The distance between the fence couplers should be a minimum of 1m and uniform throughout the fence. The panels should be supported on the inner side by stabiliser struts, which should be attached to a base plate and secured by ground pins (ref. Appendix C, Figure 3a).
- 5.9 Once the protective barrier is in place it must remain in situ throughout the course of the development until the completion of development, other than to facilitate agreed tree removal; see below.
- 5.10 Copies of the Tree Protection and Removal Plan shall be placed in the site office for reference by all site staff.
- 5.11 Signs detailing the purpose of the protective barrier shall be attached to the barriers at 10m intervals. Signs must be replaced as necessary should they be removed or become illegible.
- 5.12 Following erection of the protective barriers and prior to commencement of the development it is recommended that an inspection of the site, by either the Council's Tree Officer or the Arboricultural Consultant, is arranged to confirm fencing has been installed in accordance with the Tree Protection Plan and any relevant conditions that may be attached to a grant of planning consent for the development.

Site Compounds and Materials Stores

- 5.13 Activities related to the establishment of a temporary site compound have the potential to impact upon retained trees by various means. In particular the storage and mixing of chemicals and materials such as concrete can have a damaging effect on tree health if precautions are not taken.
- 5.14 To prevent harm occurring to trees provision for materials storage, deliveries and other related activities shall be made available in areas away from retained trees.

6 ARBORICULTURAL METHOD STATEMENT

General

- 6.1 This Arboricultural Method Statement (AMS) has been prepared to support the ongoing health and vitality of trees to be retained through the proposed demolition/construction phase through to completion of the development of the site.
- 6.2 The methodologies, practices and recommendations contained within this AMS follow relevant guidance contained within BS5837:2012 Trees in Relation to Design, Demolition and Construction.
- 6.3 The governing Authority is XX Council who where applicable should be consulted on any matters that relate to trees on the site.
- 6.4 Any variation from the methodologies, practices and recommendations described within this AMS shall be discussed with the appointed supervising Arboricultural Consultant and approved with the governing Authority.

Restrictions within Tree Protection Areas

- No mechanical excavation,
- No excavation by any other means without arboricultural supervision;
- No lowering of level for any purpose without arboricultural supervision,
- No storage of plant, equipment or material,
- No vehicular or plant access,
- No fire lighting,
- No handling, discharge or spillage of any chemical substance included cement washings.

Reporting, Site Monitoring and Supervision

- 6.5 Should any arboricultural issues become apparent during the works the site manager should immediately contact the appointed project Arboricultural Consultant or the Council's Tree Officer for advice upon how to proceed.
- 6.6 On-site arboricultural supervision is available throughout the scheme over and above the agreed Arboricultural Site Supervision Methodology. Should it be deemed necessary the Site Manager and/or a representative from the Council's Tree Team can request arboricultural site supervision at any time during the works.
- 6.7 Supervision will require the appointed project Arboricultural Consultant to be present throughout the task. If in the case that the task is likely to take an extended amount of time, then photographic evidence at key stages may be acceptable and/or telephone contact between the Site Manager and Arboricultural Consultant.

Tree Works

- 6.8 Prior to beginning any tree work operations, the method of disposal, utilisation, or retention of arisings will be agreed upon. Unless other disposal options are impracticable or, as in the case of Ash Dieback, the material is infected by a disease or pest for which industry sanitation guidance is required, arising will not be burned.
- 6.9 Pruning should also be avoided during or immediately following a drought.

- 6.10 All works that require vegetation disturbance may also be subject to prior nesting bird assessments to prevent a breach of wildlife legislation (Wildlife and Countryside Act 1981, as amended). Where works are proposed between March and September, inclusive, a nesting bird check will be required (no longer than 48 hours prior to works) by a suitably qualified Ecologist) to determine if breeding birds are present, and if mitigation measures (to include buffer zones until young have fledged) are required.
- 6.11 All proposed tree works should be carried out in accordance with BS3998:2010 'Tree Works Recommendations'. It is recommended that a contractor approved by the Arboricultural Association¹ is appointed to carry out any trees works on-site.

¹ www.trees.org.uk

7 CONSTRUCTION EXCLUSION ZONE

- 7.1 The Construction Exclusion Zone (CEZ) is defined by the protection fence line as shown on the Tree Removal and Protection Plan.
- 7.2 The tree protection fence shall be erected prior to construction works commencing on site and shall remain in place until after all construction activities have been completed and then only with the prior approval of the arboricultural consultant.
- 7.3 This CEZ shall not be disturbed, and the protective fencing shall not be moved or taken down at any time unless to replace first phase protective measures with a second phase. Any required changes to the CEZ that deviate from the approved plans shall be agreed with the appointed project Arboricultural Consultant and/or the Local Authority Tree Officer.
- 7.4 Within the CEZ there must be no mechanical digging or scraping, no alteration to existing ground levels including soil stripping, no earthworks, no handling or discharge of any chemical substance, concrete washings or of any fuels.
- 7.5 Vehicular or pedestrian access and the storage of any materials is prohibited within the CEZ.
- 7.6 No materials that may contaminate the soil such as concrete mixings, diesel oil and vehicle washings shall be discharged within 10m of the stem of any tree and no fires shall be lit within 10m of the maximum extent of a trees crown.

8 TREE PROTECTION FENCING

- 8.1 The tree protection fence shall be erected as shown in the Tree Removal and Protection Plan.

The fence line shown is the minimum required, and the length of the fence shall be extended or
- 8.2 adjusted on site as agreed with the appointed project Arboricultural Consultant to ensure satisfactory protection of all retained trees and RPAs.
- 8.3 Where proposed (permanent) construction site-hoarding provides the same level of protection to the retained trees and RPAs as the proposed tree protection fence, subject to agreement with the appointed project Arboricultural Consultant, the hoarding may serve as the tree protection fence. Notwithstanding, depending on the form and alignment of the construction site-hoarding it may be necessary to provide additional tree protection fencing to ensure adequate protection of retained trees and RPAs as shown on the Tree Removal and Protection Plan.
- 8.4 Where the site hoarding crosses within the root protection area it shall be secured in place by dead weight system only with additional bracing as required with no intrusions into the ground so as not to disturb the ground.
- 8.5 One phase of protective fencing has been proposed and illustrated on the Tree Protection Plan. Fencing, for demolition, may only be taken down once all demolition works are complete, and the site has been signed off by the appointed Arboricultural Consultant (RPS).
- 8.6 Unless otherwise agreed in writing with the appointed project Arboricultural Consultant and/or LPA Tree Officer, the fencing system to be utilised shall be in accordance with BS5837:2012.
- 8.7 For example, 2m tall, welded mesh panels on rubber or concrete feet. In such cases, the fence panels should be joined together using the minimum of 2 anti-tamper couplers, installed so that they can only be removed from inside the fence. The distance between the fence couplers should be a minimum of 1m and uniform throughout the fence. The panels should be supported on the inner side by stabiliser struts, which should be attached to a base plate and secured by ground pins.
- 8.8 Where site circumstances and associated risk of damaging incursion into the RPA do not necessitate the default fencing specification, where agreed with the Arboricultural Consultant and/or LPA Tree Officer, an alternative fencing specification may be used.
- 8.9 For example, 1m high heavy duty hi-vis barrier to act as a visual tree protection barrier for contractors to be aware of the RPAs in this area. This will be erected and fitted to metal poles, timber stakes or railway pins driven into the ground at regular intervals.
- 8.10 Once the protective barriers are in place, they must remain in situ throughout the course of the development until the completion of construction, other than to facilitate agreed tree removal. or re-instatement of first phase protective measures with second phase whilst transitioning from demolition to construction.
- 8.11 Copies of the Tree Removal and Protection Plan (Appendix D) shall be placed in the site office for reference by all site staff.

- 8.12 Signs detailing the purpose of the protective barrier shall be attached to the barriers at 10m intervals. Signs must be replaced as necessary should they be removed or become illegible. Example below>

- 8.13 Following erection of the protective barriers and prior to commencement of the development it is recommended that an inspection of the site, by either the Council's Tree Officer or the Arboricultural Consultant, is arranged to confirm fencing has been installed in accordance with the Tree Removal and Protection Plan and any relevant conditions that may be attached to a grant of planning consent for the development have been met.

9 SITE COMPOUNDS AND MATERIAL STORES

- 9.1 Activities related to the establishment of a temporary site compound have the potential to impact upon retained trees by various means. The storage and mixing of chemicals and materials such as concrete can have a damaging effect on tree health if precautions are not taken.
- 9.2 To prevent harm occurring to trees provision for materials storage, site offices, deliveries and other related activities shall be located outside of the RPAs of all arboricultural features to be retained.

Demolition

- 9.3 Demolition shall be undertaken inwards from within the footprint of the building in a retreating manner away from the tree.
- 9.4 All material will be demolished onto the ground floor slab, scraped and debris gathered outside of RPA ready for exporting off-site.
- 9.5 Demolished materials shall be moved away from the trees as soon as safely possible, with no stored materials remaining within RPA areas.
- 9.6 According to section 7.3.4 of the BS5837, where trees stand adjacent to structure to be removed, the demolition should be undertaken inwards within the footprint of the existing building (often referred to as “top down, pull back”).
- 9.7 The advice of the Project Arboriculturist should be sought where underground structures present within the RPAs will become redundant or removed. However, as a general rule of practice, it is better to leave structures in situ where possible to prevent unnecessary damage to tree roots.

Example of open face demolition

Excavation within the RPAs (Removal of existing building foundations)

- 9.8 The removal of existing building foundations will be required near to T311 & G40 (for example).
- 9.9 The following methodology should be used as a guideline and may need to be adapted as the demolition phases progress:
- 9.10 A toolbox talk will be provided to all contractors by the project Arboricultural Consultant as part of site inductions. This document may be used as a point of reference if there were to be a dispute over compliance with related planning decisions.
- 9.11 Allow access to the protected RPA and CEZ by dismantling any protection measures in place (typically, Tree Protective Fencing) and erect or install temporary tree protection measures. This should be done in the presence of the project Arboricultural Consultant.
- 9.12 Once this has been undertaken, the next stage of breaking out of the subbase, floor/foundations (and any subterranean materials) will be subject to further arboricultural and engineer review, depending on the site conditions identified.
- 9.13 The removal of the substantial (>30cm deep) structures, foundations or footings will be undertaken using a large excavator will be uplifted with minimal excavation (at all stages, it may be necessary to apply appropriate damping-down to reduce potentially harmful pollutants affecting nearby air quality and avoid dust from damaging long-term tree health). This should be done in the presence of the project Arboricultural Consultant.
- 9.14 Following the removal of all hardstanding, foundations and low-lying structures, it may be necessary to undertake ground decompaction to provide the perceived rooting environment with greater aeration and to reduce the soil bulk density. Decisions surrounding the level of intervention and remediation required will be made on site by the project Arboricultural Consultant.
- 9.15 Once all works are complete, all mandated Tree Protective Fencing will be re-erected around the trees at the agreed distance, to safeguard the tree/s from damage for the remaining duration of construction works.
- 9.16 During these works, it is possible that some roots will be cut. A decision on the cutting or severance of any roots discovered or identified during these works will be made by the project Arboricultural Consultant. Roots will be pruned back by the onsite Arboriculturist as they become exposed.
- 9.17 The freshly pruned roots should be wrapped in hessian and kept damp until the area can be backfilled. Roots will never be left exposed or allowed to dry out.

10 ARBORICULTURAL CHECKLIST

Ref	Work Activity	Tree Reference	Schedule of Works	Refer	Recommendations
General site works and tree related operations					
01	Pre-start site meeting		Pre-start site meeting with LPA tree officer, site manager, client representative and arboriculture consultant to agree scope of works.		
02	Protect trees to be retained		Barriers should be fit for the purpose of excluding construction activity and should remain rigid and complete. Barriers are to be located in accordance with RPS Tree Protection Plan.	Tree Protection and Removal Plan	Ongoing monitoring by appointed person
03	Protective barrier to be inspected by LPA (if required)		Give LPA at least 2 working days' notice of the erection of the temporary protective fencing.		Appointed person to contact LPA prior to completion of fencing.
04	Maintain the temporary protective barrier		Ensure the temporary protective barrier is maintained throughout the entire construction period and record any breach of the tree protection.	Tree Protection and Removal Plan	Appointed person shall monitor fencing at regular intervals (minimum monthly), recording details and making good as necessary to ensure tree protection is in place at all times.
05	Removal/ partial removal of identified vegetation	See plan	Identify vegetation and agree the extent of all tree works. Carry out inspection of ivy for presence of bats / nesting birds as appropriate; Vegetation identified for removal shall be removed with care in accordance with current	Arboricultural Association Standard Conditions Of Contract And Specifications For Tree Works (2008) Edition BS 3998:2010 Tree Work	All tree work should be carried out by a suitably qualified tree surgeon, preferably an Arboricultural Association approved contractor.

TREE SURVEY, ARBORICULTURAL IMPACT ASSESSMENT & METHOD STATEMENT

Ref	Work Activity	Tree Reference	Schedule of Works	Refer	Recommendations
			H&S requirements and good arboricultural practice to avoid damage to adjacent trees / property.	Tree Protection and Removal Plan	All works shall be agreed in advance with the Tree Officer
06	Tree stump and established shrub roots removal	As above	Stumps within the RPA of retained trees should not be dug or pulled out but mechanically ground or chipped to a maximum depth of 300mm. Where this is not possible owing to the presence of roots from adjacent retained trees, only grind out the stump and leave the wider root plate <i>in situ</i> .	Arboricultural Association Standard Conditions Of Contract And Specifications For Tree Works (2008) Edition BS 3998:2010 Tree Work Tree Protection and Removal Plan	All tree work should be carried out by a suitably tree qualified tree surgeon, preferably an Arboricultural Association approved contractor
07	Removal of arisings		Removal of all arisings off site unless instructed otherwise by the CA. Fires are NOT permitted on the site	Arboricultural Association Standard Conditions Of Contract And Specifications For Tree Works (2008) Edition BS 3998:2010 Tree Work	Ongoing monitoring by appointed person
Specific tree and construction works					
08	Facilitative pruning/ facing back	See plan	Pruning cuts should be selective, i.e. removing or shortening individual branches only where required and keeping the amount of removed material and diameter(s) of pruning cut(s) to a minimum. To be undertaken in late winter before budburst, or mid-summer before leaf drop. A temporary setback of protective fencing is acceptable to facilitate these works, to be re-instated immediately afterwards.	BS 3998:2010 Tree Work	Ongoing monitoring by appointed person

TABLES

TABLE 1**Tree characteristics recorded during survey**

Tree Ref No:	Sequential reference number of trees or groups of trees. Avenues, woodlands and hedgerows were also recorded on the tree survey plan. # - denotes inaccessible trees (best estimates are made about the location, physical dimensions and characteristics.)		
Species	Species listed by common name, with scientific names (<i>italic lettering</i>).		
Height (m)	Estimated height of canopy to nearest metre.		
Branch Spread	branch spread, taken as a minimum at the four cardinal points, to derive an accurate representation of the crown		
Stem diameter @ 1.5 m (m)	Measured diameter of trunk at 1.5 m above ground level in metres unless otherwise indicated, multi-stemmed trees being measured in accordance with Annex C: BS5837		
Existing height above ground level	To inform on ground clearance, crown/stem ratio and shading the estimated height of the first significant branch and direction of growth and canopy above ground level.		
Stem No.	Number of stems (if necessary) of individual tree.		
Life Stage	Expressed as:-	Y (Young) SM (Semi-mature) EM (Early-mature) M (Mature)	OM (Over-mature) V (Veteran) D (Dead)
Physical Condition	Apparent condition expressed as the following categories, based upon a brief visual inspection from the ground only:-		Good Fair Poor Dead
Comments / Management Recommendations	General observations, particularly of structural and/or physiological condition (e.g. the presence of any decay and physical defect), and/or preliminary management recommendations and potential for wildlife habitats (not exhaustive).		
Estimated remaining contribution (years)	Estimated remaining contribution, in years (<10, 10+,20+,40+)		
Tree Quality Assessment Value: <u>Category</u>	Criteria grading with regards to Table 1: BS 5837:2012, expressed as:-	A (Trees/Vegetation of high quality and value) B (Vegetation of moderate quality and value) C (Trees/Vegetation of low quality and value) U* (Those in such a condition that they cannot realistically be retained as living trees in the context of the current land use for longer than 10 years)	
	* Category U trees can have existing or potential conservation value which might be desirable to preserve.		
Tree Quality Assessment Value: <u>Sub - Category</u>	Criteria grading with regards to Table 1: BS 5837:2012, expressed as:-	1 (Trees with mainly <i>arboricultural</i> value) 2 (Trees with mainly <i>landscape</i> value) 3 (Trees with mainly <i>cultural / conservation</i> value)

Status: For Information

Revision: -

Notes: Stem dia. (mm) for trees with 6 or more stems are estimated averages.

Ref. no.	Species	Height (m)	Crown spread (m)				Stem dia. (m)	Stem no. at 1.5m	Height of crown clearance (m)	Dir/ height	Age class	Structural condition	Physiological condition	General observations Management recommendations	Estimated remaining contribution (years)	Tree Quality Category (BS5837)
T131	Acer campestre - Field Maple	10	1.5	2.5	2	2.5	100, 150, 80, 80	4.00	4	East	SM	Fair	Good	Good Crown vitality, multiple leaders in Crown. Compression forks developing between basal stems. Limited individual stature, group value.	20-40	C2
T132	Acer campestre - Field Maple	11	0.5	2.0	2.0	2.5	80, 80, 100	3	6.0	East	SM	Fair	Good	Formed of multiple adjacent stems at ground level. Narrow crown. Limited individual stature.	10-20	C2
T133	Fraxinus excelsior - Common Ash	12	1.0	5.0	5.5	3.0	150, 100, 150	3	3.0	East	SM	Fair	Good	Formed of two adjacent stands at ground level. Further diverges in Crown, which lacks central leader. Moderate Ivy on middle stem. Limited individual amenity.	20-40	C2
T134	Fraxinus excelsior - Common Ash	13	2.5	3.0	4.0	3.5	100	6.00	4.0	East	EM	Fair	Good	Coppice store with a regrowth. Multiple leaders in Crown. Limited individual amenity.	20-40	C2
T135	Fraxinus excelsior - Common Ash	13	2.5	1	3	2.5	150	1	4	NE	SM	Fair	Good	Tall narrow crowned form. Apical dominance lost at approximately 7 m. Compression fork likely to develop at point of bifurcation.	20-40	C2
T136	Acer campestre - Field Maple	12	4	1.0	2	3	200	1	4.00	NE	SM	Fair	Good	Multiple leaders in Crown. Good Crown vitality. Limited individual amenity. Unable to inspect unions in detail due to dense vegetation.	20-40	C2
T137	Quercus robur - Pedunculate Oak	18	8.0	8.0	7.0	9.0	200	1	3.5	SE	M	Good	Good	Prominent tree in Hedgerow. Wide spreading dense Crown with good vitality. Minor to moderate deadwood in lower Crown. Ivy throughout in a Crown limited inspection of branch to stem unions. A fine tree.	40+	A2
T138	Fraxinus excelsior - Common Ash	14	5	5	4.5	4	150, 150, 150	3.00	4	East	SM	Fair	Good	Tree is slightly taller than others in Hedgerow. Limited individual amenity nonetheless. lacks central leader multiple stems at ground level. Inspection of lower stems limited by dense vegetation. stem diameter is estimated. Ivy clad middle stems.	20-40	C2
T139	Quercus robur - Pedunculate Oak	16	5.5	5.5	7.5	7.0	350, 200	2.00	2.5	South	EM	Good	Good	Good decurrent Crown form. Good ground vitality. Branch diverges from main stem to the east. Accessed to stem limited, diameter estimated.	20-40	B2
T140	Quercus robur - Pedunculate Oak	16	5.0	5.5	5.0	4.0	350.00	1.00	2.0	South	EM	Fair	Good	Bifurcates at ground level, union appears sound. Stems self suppress one another. Good crown vitality.	20-40	B2
T141	Fraxinus excelsior - Common Ash	12	1.5	2.0	1.0	5.0	150	1	4.0	SW	SM	Fair	Good	Crown form suppressed by adjacent tree. Good vitality nonetheless. Leader off kilter to the West.	20-40	C2
T142	Quercus robur - Pedunculate Oak	17	8	5.5	6.5	7.5	800	1	4	SW	M	Good	Good	Prominent tree located at border. Wide spreading crown. Good vitality. Ivy cloaked from stem to mid crown. Previous excavation within RPA.	40+	A2

Note: This survey is based on a brief visual inspection from the ground.
It is not intended as a full arboricultural inspection.
- Indicates estimated tree. * - Indicates off site tree.

			N	E	S	W										
T154	Quercus robur - Pedunculate Oak	15	8	8	7	6.5	380	1	3	South	EM	Good	Good	Well structured crown. Good vitality. Future potential.	40+	B2
T155	Fraxinus excelsior - Common Ash	17	6.0	6.5	4.5	7.0	250, 200, 150, 200, 200	5.00	3.0	South	EM	Fair	Good	Formed of several adjacent stems at ground level. Unable to inspect basal unions due to dense vegetation. Good crown vitality, lacks central leader. Group value.	20-40	C2
T156	Quercus robur - Pedunculate Oak	18	3.0	6.5	1.5	5.0	250	1	2.0	South	EM	Good	Good	Crown suppressed in North, bias the south stop good apical growth and vitality. Group value.	20-40	C2
T157	Quercus robur - Pedunculate Oak	20	5.0	9.0	5.0	6.0	700	1	2.5	South	M	Good	Good	Good Crown vitality. More mature tree in group. Minor previous limb failure.	40+	A2
T158	Quercus robur - Pedunculate Oak	20	4.5	3.0	1.5	4.0	400	1	7.0	South	EM	Fair	Good	Tall, with relatively narrow crown form. Five the case at approximately 2 m, unable to inspect union due to fence and vegetation. Moderate deadwood in inner crown.	20-40	C2
T159	Quercus robur - Pedunculate Oak	18	1.5	9.5	2.5	2.5	300	1	0.0	South	EM	Fair	Good	Crown suppressed by neighbouring trees, bias to South. Long lateral limb with heavy end weights developing, further monitor. Group value, but limited individual amenity.	20-40	C2
T160	Quercus robur - Pedunculate Oak	20	1.5	10.0	2.5	7.5	300, 350	2.00	0.0	South	EM	Fair	Fair	Crown form biased to South, main stem bowing to South. Central leader previously failed. woodpecker holes noted on underside of bowing limb to South. Bifurcated at approximately 2 m. compression fork present. Further monitor structural	20-40	C2
T161	Quercus robur - Pedunculate Oak	20	4	9.5	3.0	6.0	420	1	0.0	South	EM	Fair	Good	Apical dominance lost at approximately 7 m, co-dominant leaders in Crown. Hanging branches caught up in Crown from adjacent tree. Minor deadwood in lower Crown.	20-40	B2
T162	Quercus robur - Pedunculate Oak	17	0.0	7.5	3.0	1.0	250	1	6.0	South	SM	Fair	Good	Stem off kilter and leaders straying to South West. Ivy cloaked stem. Limited individual stature.	20-40	C2
T163	Quercus robur - Pedunculate Oak	21	10	7	2.5	3	300, 350	2.00	8.00	South	EM	Fair	Good	Bifurcates a ground level, union appears sound. Co-dominant crown.	40+	B2
T164	Quercus robur - Pedunculate Oak	20	6	11	10.5	10.5	660, 430	2.00	0.0	South	M	Fair	Good	Bifurcates at ground level, previous compression fork has included with reaction wood, appears sound. Stems self suppress, southern stem has lateral scaffold limbs heavily end weighted consider Crown reduction.	40+	A2

Note: This survey is based on a brief visual inspection from the ground.
It is not intended as a full arboricultural inspection.
- Indicates estimated tree. * - Indicates off site tree.

Notes: Stem dia. (mm) for trees with 6 or more stems are estimated averages.

Ref. no.	Species	Height (m)	Crown spread (m)				Stem dia. (m)	Stem no. at 1.5m	Height of crown clearance (m)	Dir/ height	Age class	Structural condition	Physiological condition	General observations Management recommendations	Estimated remaining contribution (years)	Tree Quality Category (BS5837)
			N	E	S	W										
T175	Fraxinus excelsior - Common Ash	16	5.5	2.5	3.0	4.0	250, 200	2.00	6.0	West	EM	Fair	Good	Bifurcates at approximately 0.5 m, unable to inspect union due to restricted access. Moderate deadwood in lower South Crown(approximately 3 m long and less than 5 cm diameter). Relatively narrow crown.	20-40	C2
T176	Quercus robur - Pedunculate Oak	12	2.5	10.0	4.5	7.5	380	1	2.0	West	EM	Fair	Fair	Suppress Crown form with bias the South West. Previous failures of major limbs in Crown noted. Major deadwood in central and eastern crown. Tip dieback noted. Smaller than expected leaf size in upper crown. Tree appears to be in slow decline.	10-20	C2
T177	Acer campestre - Field Maple	16	3.0	2.5	3.5	4.5	250, 100, 200	3.00	2.0	West	EM	Fair	Good	Formed of multiple stems from 1 m. Unions appear to be sound, but inspection limited by fence. Basal cavities indicated, inspection limited. Previous failure of leader in eastern crown, epicormic growth from wound point. Suppressed crown.	10-20	C2
T178	Fraxinus excelsior - Common Ash	18	5.5	4.0	2.5	5.5	350	1	0.0	West	EM	Good	Good	High Crown, good vitality. Good scaffold limb structure.	20-40	B2
T179	Quercus robur - Pedunculate Oak	17	1.5	6.5	2.5	2.0	400	1	8.0	West	EM	Fair	Good	Crown biased to south, good Crown vitality. Bifurcated at approximately 6 m, tension fork. Unable to inspect basal stem due to dense vegetation. Group value.	20-40	B2
T180	Acer campestre - Field Maple	15	5.0	2.0	1.0	5.0	240	1	2.0	West	EM	Fair	Good	Minor stem cavities noted at approximately 1 m and 2 m, semi-occluded with exposed sap wood. Basal stem obscured by dense vegetation. Limited stature.	10-20	C2
T181	Crataegus monogyna - Common Hawthorn	15	2.0	1.5	1.0	1.5	200	1	1.5	West	M	Fair	Good	Scrappy form, lower stem obscured by dense vegetation. Narrow crown, limited stature. Minor dieback in lower crown.	10-20	C2
T182	Quercus robur - Pedunculate Oak	20	6.5	10.0	11	10.0	650	1	2.0	West	M	Good	Good	Wide spreading crown, good scaffold limbs structure, lever arms reduced in upper crown. Good vitality. Clear stem. Prominent tree in area. Unable to inspect basal stem due to dense vegetation, stem diameter estimated.	40+	A2
T183	Quercus robur - Pedunculate Oak	15	4.5	2.0	1.0	6.0	300	1	2.0	West	SM	Fair	Good	Basal stem cavity noted at 1 m on Western stem. Approximately 1 m long, semi-occluded with internal decay to Heartwood. Good crown vitality, Crown suppressed to East. Limited stature. Further monitor internal decay extents.	20-40	C2
T184	Quercus robur - Pedunculate Oak	18	8.0	10.0	8.0	11	550	1	0.0	West	EM	Good	Good	Even upper Crown, good decurrent crown form. Lower Crown overhangs site boundary. Prominent tree. Stem diameter estimated.	40+	A2

Note: This survey is based on a brief visual inspection from the ground.

It is not intended as a full arboricultural inspection.

- Indicates estimated tree. * - Indicates off site tree.

			N	E	S	W										
T417	Quercus robur - Pedunculate Oak	20	4.5	4.5	8.0	7.0	300, 430	2.00	2.0	West	EM	Fair	Good	Two adjacent stems surveyed together. Northern steis dominant with an even Crown that has been previously Crown reduced. Southern Stan is offkilter and leans approximately 15° to the north west. Give vitality in both crowns.	40+	B2
T418	Acer campestre - Field Maple	11	2.5	3.5	3.5	4.5	170, 150	2.00	1.5	East	EM	Fair	Good	Bifurcates at 1.5 m, compression fork with adaptive growth. Codominant leaders in Crown, lateral support. Good vitality. Limited stature.	20-40	C2
T419	Fraxinus excelsior - Common Ash	23	7.5	3.0	6.0	3.0	560	1	0.0	West	M	Fair	Good	Ivy clad stem from 1 m to approximately 16 m where Crown diverges. Unable to inspect unions due to ivy. Crown lacks central leader. Major previous limb failure noted, tear out wound semi occluded. Prominent skyline amenity.	40+	A2
T420	Fraxinus excelsior - Common Ash	16	1.5	4.5	0	6.5	300	1	13	South	EM	Fair	Good	Not plotted on land survey plan. Them off kilter with an approximate 20° angle to the south from 2 m. Corrected with vertical growth of leaders in Crown. Ivy cloaked from 1.5 m to 10 m. Scrappy form, limited stature.	20-40	C2
T421	Fraxinus excelsior - Common Ash	15	5.0	0.0	1.0	2.5	230	1	8.0	South	SM	Fair	Good	Suppressed Crown with heavy bias to the south. Leader strays offkilter from approximately 3 m at an approximate 30° angle.	20-40	C2
T422	Fraxinus excelsior - Common Ash	17	6	1.5	0	3	380	1	0.0	West	EM	Poor	Good	Major basal internal decay, with open wound and extensive heartwood rot. Bifurcates at approximately 2 m, southern stem has failed. Good vitality in remaining leader, however, the attachment point to the stem is becoming increasingly decayed.recommend tree is pollarded.	<10	U
T423	Quercus robur - Pedunculate Oak	16	7.5	8.5	3.5	4	420	1	0.0	West	EM	Fair	Good	Building/structure located in RPA. Strong, clear stem. Shipping container in RPA. Main leader biased to the south, Crown balance by major limb to the north. Give vitality. Minor to moderate deadwood in lower self Crown. Partially failed limbs in middle Crown noted.	40+	B2
T424	Acer campestre - Field Maple	20	4.5	6.0	3.0	6.0	300, 200	2.00	2.5	NW	M	Fair	Fair	Not plotted on land survey plan. Stem ivy clad from 1 m to upper crown. Bifurcates approximately 1.5 m, union obscured. Crown lacks central leader. Dieback in lower crown. Inspection limited by ivy. Scrappy form.	10-20	B2
T425	Fraxinus excelsior - Common Ash	22	4	3.5	3.5	6.5	220, 350, 210	3.00	1.5	SW	EM	Good	Good	Formed of multiple adjacent stems, central stem is dominant and diverges into good decurrent crown form. Crowns combine to give moderate landscape value.	40+	B2

Note: This survey is based on a brief visual inspection from the ground.
It is not intended as a full arboricultural inspection.
- Indicates estimated tree. * - Indicates off site tree.

Site Hogwood

Project schedule ref: JSL4360_750

Drawing reference: JSL4360_700

Survey date: Dec 2017 / Jan 2018 / Jun 2019/ April 2021/Jan 2022 (P8&9)

Surveyor:

Status: For Information

Revision: -

Notes: Stem dia. (mm) for trees with 6 or more stems are estimated averages.

Ref. no.	Species	Height (m)	Crown spread (m)				Stem dia. (m)	Stem no. at 1.5m	Height of crown clearance (m)	Dir/ height	Age class	Structural condition	Physiological condition	General observations Management recommendations	Estimated remaining contribution (years)	Tree Quality Category (BS5837)
T625	Fraxinus excelsior - Common Ash	16	7.0	3.0	5.0	4.0	240, 200	2.00	5.0	North	SM	Fair	Good	Young tree established at woodland edge. Bifurcates at 1.5 m, compression fork with compensatory growth at union. Minor Deadwood in Western Crown.	20-40	C2
T626	Fraxinus excelsior - Common Ash	16	5	4	2.5	5.5	250, 180	2.00	7	NW	SM	Fair	Good	Young tree established that woodland edge. Bifurcates at .5 m, compression fork. Multiple leaders in Crown. Minor Deadwood in lower Crown.	20-40	C2
T627	Fraxinus excelsior - Common Ash	18	5.5	3.5	4.5	4	380	1	5	North	EM	Fair	Good	More mature tree at woodland edge. Basal stem slightly offkilter, corrected in Crown. Slight Crown bias to North, otherwise good form. Minor Deadwood in lower Crown.	20-40	B2
T628	Quercus robur - Pedunculate Oak	18.5	6	2.5	6	6	300, 200, 130, 200	4.00	3	East	EM	Fair	Good	Multiple stems at ground level, no included growth unions noted. Good Crown vitality. Deadwood in lower South Crown. Lacks central leader. Moderate group and individual value.	40+	B2
T629	Fraxinus excelsior - Common Ash	18	5.0	4.0	4.5	4.5	210, 210, 110	3.00	3.0	East	SM	Fair	Good	Bifurcates at ground level, Crown lacks central leader. Major open basal wound with extensive internal decay. Failure of basal stem possible. Deadwood limbs in Crown.	<10	U
T630	Fraxinus excelsior - Common Ash	18	7.5	5.5	5.0	7.5	330, 180, 290	3.00	2.5	East	EM	Fair	Good	Tree at edge of woodland border. Bifurcates at ground level, included growth not noted. Crown lacks central leader. Good vitality. Pruning wounds to lower East. Crown.	20-40	B2
T631	Fraxinus excelsior - Common Ash	10	5	1	5.5	4	100, 140	2.00	0.0	East	SM	Poor	Fair	Not plotted on land survey plan. Large open wound at basal stem. Extensive internal decay present. Basal stem fracture a possibility.	<10	U
T632	Fraxinus excelsior - Common Ash	13	2.0	2.0	3.0	1.0	370	1	9.0	East	SM	Poor	Fair	Not plotted on land survey plan. Recommend tree is removed. Longitudinal open wound from ground level to approximately 8 m. Extensive internal decay. Tree failure imminent.	<10	U
T633	Populus alba - White Poplar	13	5.5	5	12	0	270, 300	2.00	3	East	EM	Poor	Fair	Recommend tree is removed. Tree is leaning heavily to the East, lever arms are not reduced. Uprooting likely.	<10	U
T634	Taxus baccata - Common Yew	10	3.0	3.0	5.0	0.0	120, 120, 120, 120	4.00	1.0	South	SM	Fair	Good	Multiple stems at 1.5 m, compression forks with included growth. Crown lacks central leader. Pruning wounds to Eastern Crown. Limited stature.	40+	C2
T635	Fraxinus excelsior - Common Ash	10	3.0	3.0	2	4.5	170, 140, 120	3.00	2	West	SM	Fair	Poor	Extensive dieback in upper Crown. Likely limited useful lifetime expectancy. Limited amenity.	10-20	C2

Note: This survey is based on a brief visual inspection from the ground.
It is not intended as a full arboricultural inspection.
- Indicates estimated tree. * - Indicates off site tree.

Status: For Information

Revision: -

Notes: Stem dia. (mm) for trees with 6 or more stems are estimated averages.

Ref. no.	Species	Height (m)	Crown spread (m)				Stem dia. (m)	Stem no. at 1.5m	Height of crown clearance (m)	Dir/ height	Age class	Structural condition	Physiological condition	General observations Management recommendations	Estimated remaining contribution (years)	Tree Quality Category (BS5837)
			N	E	S	W										
G34	Alnus glutinosa - Common Alder Salix sp. - Weeping Willow Quercus robur - Pedunculate Oak	13.0	as shown.				100-200	-	-	-	Y-SM	Fair	Good	Bramble encroachment.	20-40	B2
G35	Alnus glutinosa - Common Alder Populus nigra 'Italica' - Lombarby Poplar Fraxinus excelsior - Common Ash Quercus robur - Pedunculate Oak	16.0	as shown.				100-350	-	-	-	Y-SM	Fair	Good	Tree belt on field boundary comprising mixed broadleaved species. Poplar occur in intermittent clumps. Collective worth greater than individuals present.	40+	A2
G36	Salix caprea - Goat Willow	7.0	as shown.				180-200	-	-	-	Y-SM	Fair	Good		10-20	C2
G37	Crataegus monogyna - Common Hawthorn	7.0	as shown.				180-200	-	-	-	M-M	Fair	Good	Hedgerow remnant.	10-20	C2
G38	Crataegus monogyna - Common Hawthorn	7.0	as shown.				180-200	-	-	-	M-M	Fair	Good	Hedgerow remnant.	10-20	C2
G39	Crataegus monogyna - Common Hawthorn	7.0	as shown.				200-250	-	-	-	M-M	Fair	Good	Hedgerow remnant.	10-20	C2
G40	Thuja plicata Western Red Cedar	9.0	as shown.				-	-	-	-	MA	Fair	Good	Formed of stems ave 0.20Ø, offers some screening and evergreen interest, little else.	+ 20	C2
G41	Acer campestre, Crataegus monogyna, Prunus sp. Field Maple, Common Hawthorn, Prunus	8.0	as shown.				-	-	-	-	M	Fair	Poor	Grown-out remnant hedge between road and ditch. Ivy clad, partially moribund. Field Maple of some possible potential noted.	+ 20	C2
G42	Corylus avellana, Fraxinus excelsior, Salix caprea, Salix cinerea, Sambucus nigra Common hazel, Common Ash, Goat Willow, Grey Willow, Elder	8.0	as shown.				-	-	-	-	M	Fair	Fair	Mixed species at entrance to site. Fairly well formed, early mature individual tree within group. Tree guards noted with underplanting of mixed success.	+ 25	B2
G43	Fraxinus excelsior Common Ash	9.0	as shown.				-	-	-	-	M	Fair	Fair	Ash poles, multi-trunked and typically vigorous. To road edge and understory formed of Dogrose, Blackthorn and dense bramble.	+ 20	C2

Note: This survey is based on a brief visual inspection from the ground.
It is not intended as a full arboricultural inspection.
- Indicates estimated tree. * - Indicates off site tree.

			N	E	S	W										
G44	Ilex aquifolium, Quercus robur, Prunus spinosa, Acer campestre Common Holly, Pedunculate Oak, Blackthorn, Field Maple	8.0	as shown.				-	-	-	-	M	Fair	Fair	Boundary group established with larger climax trees within group. Vegetated to the ground, the group offers screening and definition to Sheerlands Road and enclose to the western plot.	+ 25	B2
G45	Acer campestre, Prunus spinosa Field Maple, Blackthorn	9.0	as shown.				-	-	-	-	M	Fair	Good	Formed of multi-trunked trees vegetated to the ground. Deciduous screening.	+ 25	B2
G46	Fraxinus excelsior Common Ash	10.0	as shown.				-	-	-	-	M	Fair	Fair	Typically vigorous multi-trunked trees.	+ 15	B2
G47	Acer campestre, Crataegus monogyna Field Maple, Common Hawthorn	6.5	as shown.				-	-	-	-	M	Fair	Poor	Trees stunted and clad with bramble.	+ 15	C2
G48	Fraxinus excelsior, Quercus robur, Ilex aquifolium Common Ash, Pedunculate Oak, Common Holly	12.0	as shown.				-	-	-	-	M	Fair	Fair	Ash climax with mid-story Oak and Holly.	+ 15	B2
G49	Acer campestre Field Maple	2.5	as shown.				-	-	-	-	M	Fair	Good	Hedge/group bounding the field edge and growing under large climax Oak trees.	+ 15	C2
G50	Quercus robur, Corylus avellana, Ilex aquifolium Pedunculate Oak, Common Hazel, Common Holly	14.0	as shown.				-	-	-	-	M	Fair	Good	Large, well formed Oak bounding the access track. Dead wood noted and Ivy cloaking the lower crown of a number of the trees. Located on either side of boundary ditch. High in skyline amenity.	+ 40	A2
G51	Quercus robur, Fraxinus excelsior, Acer campestre Pedunculate Oak, Common Ash, Field Maple	>18	as shown.				-	-	-	-	M	Fair	Good	Group on boundary bank on the site side of the ditch. This forms a strong backdrop and adds enclosure to the northern boundary of the site.	+ 35	A1
G52	Salix fragilis Crack Willow	10.0	as shown.				-	-	-	-	M	Fair	Poor	Group established in a wet dell at bend of road. Formed of lapsed/regenerating trunks. Vigorous to the tips.	+ 10	C2
G53	Quercus robur, Corylus avellana, Acer campestre, Fraxinus excelsior English Oak, Common Hazel, Field Maple, Common Ash	12.0	as shown.				-	-	-	-	M	Fair	Good	Established on bund. Mixed species field boundary, Hazel.	+ 35	A1

Note: This survey is based on a brief visual inspection from the ground.
It is not intended as a full arboricultural inspection.
- Indicates estimated tree. * - Indicates off site tree.

			N	E	S	W										
G54	x3 Cupressocyparis x leylandii Leyland Cypress	13.0	as shown.				-	-	-	-	M	Fair	Fair	Three closely established trunks.	+ 15	C2
G55	Acer campestre, Fraxinus excelsior, Quercus robur, Crataegus monogyna Field Maple, Common Ash, Pedunculate Oak, Common Hawthorn	16.0	as shown.				-	-	-	-	M	Fair	Good	Climax Oak with mid-story trees of Maple and Hawthorn.	+ 25	B2
G56	Fraxinus excelsior, Quercus robur, Acer campestre, Prunus spinosa Common Ash, Pedunculate Oak, Field Maple, Blackthorn	14.0	as shown.				-	-	-	-	M	Fair	Fair	Large, well formed climax Oak, Ash with a lower/mid story of Field Maple.	+ 20	B2
G57	Fraxinus excelsior, Acer campestre, Corylus avellana, Prunus spinosa Common Ash, Field Maple, Common Hazel, Blackthorn	14.0	as shown.				-	-	-	-	M	Fair	Fair	Gappy hedge with large climax tree. Hazel coppice.	+ 15	C2
G58	Acer campestre Field Maple	13.0	as shown.				-	-	-	-	M	Fair	Fair	On woodland/field edge. Multi-trunked tree.	+ 25	B2
G59	Cupressocyparis x leylandii Leyland Cypress	18.0	as shown.				-	-	-	-	M	Fair	Fair	Line of leylandii bounding waterbody.	+ 15	C2
G60	Alnus glutinosa, Salix sp., Betula pendula Common Alder, Willow, Silver Birch	7.0	as shown.				-	-	-	-	M	Fair	Fair	Within area of dense vegetation.	+ 15	C2
G61	Prunus spinosa, Quercus robur, Acer campestre, Corylus avellana Blackthorn, Pedunculate Oak, Field Maple, Common Hazel	3.5	as shown.				-	-	-	-	M	Fair	Fair	Remnant hedge.	+ 15	C2
G62	Quercus robur Pedunculate Oak	18.0	as shown.				-	-	-	-	M	Fair	Good	Trees located on field's edge and edge of Maria Way Industrial Estate. Large, well formed Oak. Blackthorn forms the understory to the south-west.	+ 45	A1
G63	Quercus robur, Fraxinus excelsior Pedunculate Oak, Common Ash	9.0	as shown.				-	-	-	-	M	Good	Good	Semi-mature tree line with potential.	+ 30	B2

Note: This survey is based on a brief visual inspection from the ground.

It is not intended as a full arboricultural inspection.

			N	E	S	W										
G64	Fraxinus excelsior, Quercus robur, Salix caprea, Ligustrum sp. Common Ash, Pedunculate Oak, Goat Willow, Privet	8.0	as shown.				-	-	-	-	M	Fair	Fair	Trees established on a low bund, likely dating back to the construction of the light industrial area. The boles have been damaged by grazing in some instances. Dead wood.	+ 15	C2
G65	Corylus avellana, Fraxinus excelsior, Crataegus monogyna, Sambucus nigra Common Hazel, Common Ash, Common Hawthorn, Elder	9.0	as shown.				-	-	-	-	M	Fair	Fair	At field edge, beside stable. Mixed condition, scrubby multi-trunked trees and vigorous Ash.	+ 15	C2
G66	Acer campestre, Acer saccharinum, Fraxinus excelsior, Fagus sylvatica Field Maple, Silver Maple, Common Ash, Common Beech	11.0	as shown.				-	-	-	-	M	Good	Good	Well formed Oaks in grassland with ornamental species noted. In rear garden.	+ 35	A2
G67	Fraxinus excelsior, Ulmus procera, Crataegus monogyna Common Ash, English Elm, Common Hawthorn	11.0	as shown.				-	-	-	-	M	Fair	Fair	Larger, leaning Elm. Ash vigorous, in mixed remnant hedge.	+ 15	C2
G68	Acer platanoides - Norway Maple	12.0	as shown.				-	-	-	-	EM-EM	Fair	Good	Scrappy formed multi-stemmed field maples. Ivy cloaked stems. Included bark amongst basal stems, inspection limited by dense vegetation and Ivy.	10-20	C2
G69	Corylus avellana - Common Hazel Fraxinus excelsior - Common Ash	10.0	as shown.				-	-	-	-	EM-OM	Poor	Fair	Linear group mainly comprising hazel coppice stands in late mature age stage. Several have basal decay. Scrappy form, limited stature.	10-20	C2
G70	Salix cinerea - Grey Willow Quercus robur - Pedunculate Oak Crataegus monogyna - Common Hawthorn	9.0	as shown.				-	-	-	-	SM-EM	Fair	Fair		20-40	B2
G71	Betula pendula - Silver Birch Salix cinerea - Grey Willow Fraxinus excelsior - Common Ash Crataegus monogyna - Common Hawthorn	9.0	as shown.				-	-	-	-	SM-SM	Poor	Fair		10-20	C2
G72	Fraxinus excelsior - Common Ash Quercus robur - Pedunculate Oak	15.0	as shown.				-	-	-	-	EM-M	Fair	Fair		20-40	B2

Note: This survey is based on a brief visual inspection from the ground.
It is not intended as a full arboricultural inspection.

KEY PLAN (NTS)

Key

- Survey boundary.
- Tree with numbered reference. Canopy spread and BS5837:2012 tree quality category as shown below.
- Tree (location estimated) with numbered reference. Canopy spread and BS5837:2012 tree quality category.
- Tree off-site with numbered reference. Canopy spread and BS5837:2012 tree quality category.
- Vegetation group with numbered reference. Canopy extents and BS5837:2012 tree quality category as shown below.
- Hedge with numbered reference. Width and BS5837:2012 tree quality category as shown below.

BS 5837:2012 Tree Quality Categories - Table 1

- Category A - High quality
- Category B - Moderate quality
- Category C - Low quality
- Category U - Unsuitable for retention

Tree protected by Tree Preservation Order issued by Wokingham District Council number reference relates to the various TPO Schedules.

Root protection area (RPA) Calculated in accordance with Section 4.6 - BS5837:2012

Ancient Woodland (© Natural England Copyright 2018)

15m Offset from Ancient Woodland (line taken from Natural England GIS Database)

15m Offset from suggested Aged Woodland

Veteran Tree

5m offset from hedgerow edge (measured from edge of canopy)

NOTES:

- Refer to RPS Tree Survey Report & Schedule for further details.
- Survey based on a visual inspection from the ground and is not intended as a full arboricultural inspection.
- Plan produced in accordance with recommendations set out in BS 5837:2012 - 'Trees in Relation to design, demolition and construction'.
- Due to the legal protection afforded to breeding birds vegetation removal should not take place during the bird nesting period; generally, although not restricted to, March - August inclusive.
- Survey based upon topographic survey produced by in 2017
