

② Sculptural stainless steel poles with small timber platforms act as a set of stilts, providing an engaging and informal route over the low wet pour mounds.

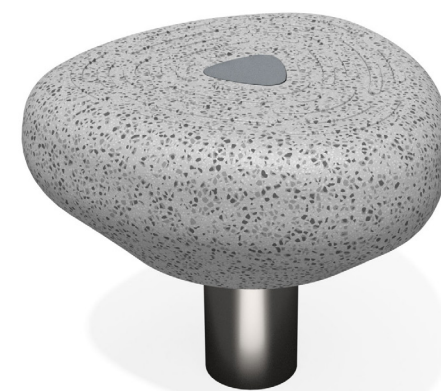

Artistic concrete benches, linked together to form an organic pattern creating informal play edges for children to navigate, as well as more intimate curved spaces for people to congregate.

① Sculptural stainless steel hoops act as play features but also as a 'gateway' entrance into the eastern end of the playspace. The feature can be climbed on, ran through, weaved through etc to engage the child's imagination.

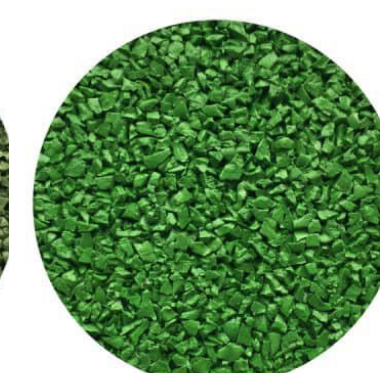

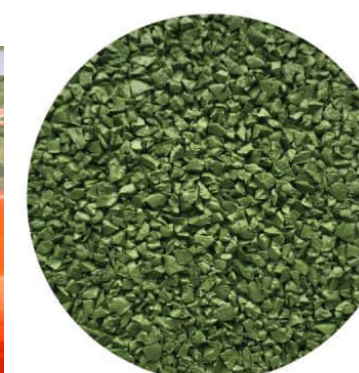

Round concrete benches with planting in the centre anchor the edges of the wet pour surface and provide informal seating and further playful edges for children to climb on.

③ A series of stone-like stepping stones, set at varied heights, provide another informal route in and out of the main space, with opportunities for children to climb and jump between posts, as well as acting as informal seating and a place for children to gather.

The play space is set in a field of sculptural, mounded wet-pour safety surface with a range of green colours to evoke grassy mounds, but act as a fall resistant and hard wearing surface, with the graded tones of colour expressing the various changes in level.
