

Landscape and Ecological Management Plan

- To encourage any new habitat on-site, including plant species we will be planting approximately 15 metres of 300mm coir rolls which will be well grown and pre-planted with locally native plant species along the regraded bank set 200mm below mean summer water level
- The details of treatment of site boundaries and/or buffers around water bodies protecting the riverbank will be as above.
- Details of maintenance regimes within a very well maintained marina for our mooring holders will include,
 - The grass is regularly cut on a weekly rota through the summer period.
 - Flowers and trees will be inspected and watered as required.
 - Rubbish on the riverbank or caught up floating by the bank is regularly removed by staff as part of their ongoing weekly/ monthly routine.
- Details of management responsibilities will be managed through Val Wyatt Environmental Policy V1, which will ensure the ongoing commitment and maintenance of this area, replanting and promoting the appearance of the marina.
