## The rights of way using an OpenStreetMap map

This web page is from [www.rowmaps.com](http://www.rowmaps.com), a project to obtain rights of way data from local authorities and to show those rights of way on maps. The underlying map on this web page is an OpenStreetMap map. **I understand this map fails to appear when using Safari - use Chrome/Firefox.**

The coloured lines that have been superimposed on this map show rights of way (using the data released by local authorities).

The following colours have been used for the coloured lines:

- solid red line: footpath;
- solid fuchsia line: bridleway;
- solid green line: restricted byway;
- solid blue line: byway open to all traffic.

If you click on a coloured line, a popup will appear giving some details about that right of way.

The popup has a button labelled *add to your route* enabling you to build a route of rights of way for a walk, run, etc. Once you've established your route you can ask for the route to be output in KML or GPX.

### Overlay a GPX file on the map

The file must have rtppt elements and/or trkpt elements.

colour of the line

width of the line

opacity of the line (between 0 and 1)
