Solar Design

Solar Design

- **260** solar panels in total
- **440W** maximum power output per panel
- **114,000 'kilowatt peak'** - *this is the total amount that all panels can theoretically generate*
- **94,000 kwh** of electricity generated per year - *taking into account annual sunlight fluctuations, location of panels and the travel of the sun over each day of the year*

94,000kwh is the total amount of energy the system can generate. This is the value we can use for savings calculations.
