

Proposed repair work to shared driveway

We would like to repair our driveway where tarmac and edging have been lifted by the Scots Pine tree roots. We are mindful there is a TPO on the tree, and roots, therefore our proposed solution ensures we do not damage the roots by either removal or pruning.

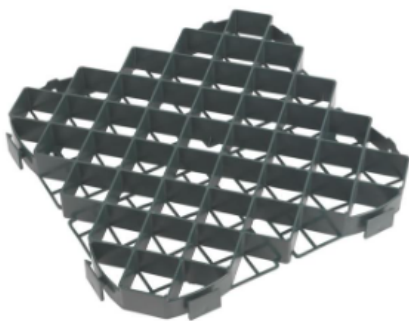

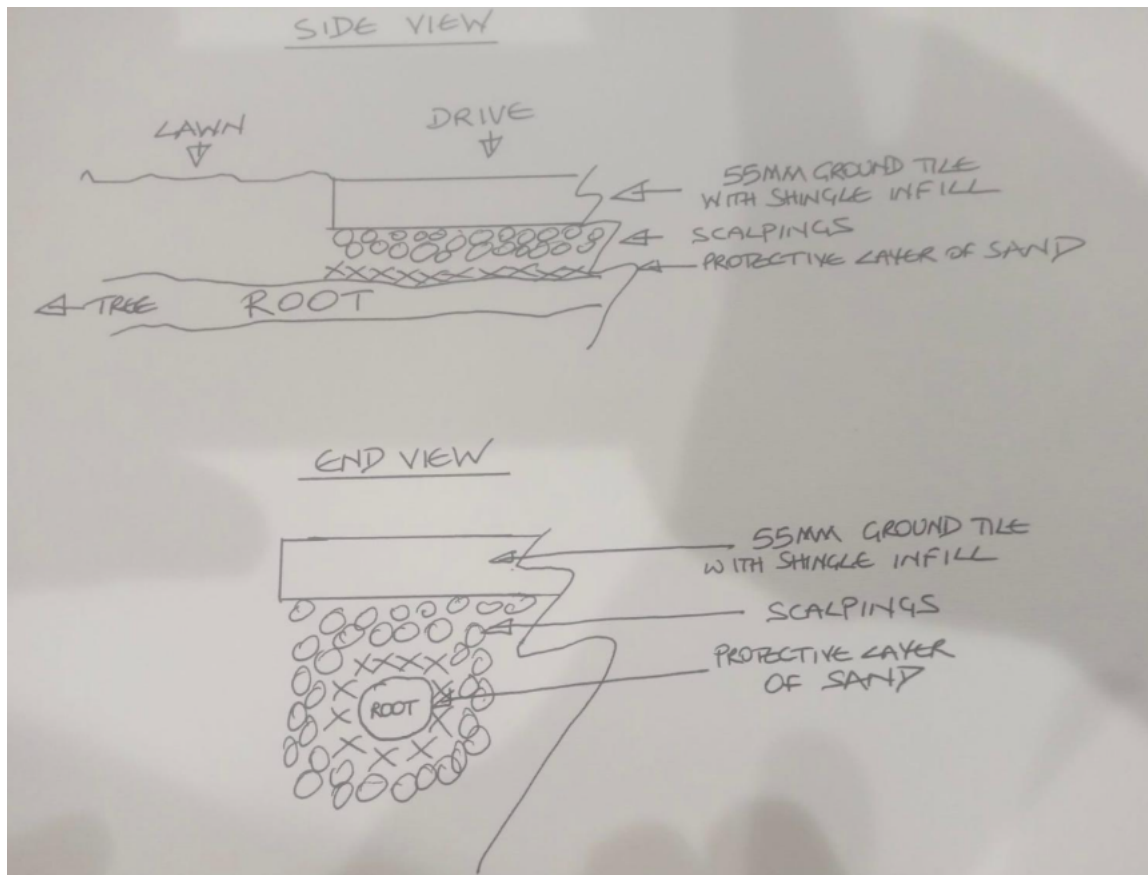

I provide pictures of the driveway and the depth of the root underneath the tarmac.

We have taken advice from a registered arboriculturist (Keiron Hart of Tamla Tree Ltd) and Sarah Duckworth and discussed their advice with a builder. The intention is to raise the level of the drive slightly in this area and widen the (shared) drive by using a new surface to bridge over the roots after careful removal of the damaged surface.

See proposed diagram from builder below.

FloPlast

FloPlast Ground Grab Tiles 402mm x 402mm x 55mm 20 Pack

Our plans do not involve any pruning or removal of roots, but given the TPO in place, I thought I should seek approval. We may not extend as far as the red line above, it will depend on how deep the roots are so we ensure continued root protection.

We hope to start work late May/ early June, therefore please let me know within 21 days if you have any concerns.

Thank you
