COMMENTS:

Having spent my life around aquatic environments such as lakes and Rivers, I have a keen interest in all aquatic life such as birds, fish and other inhabitants like frogs and insects. In a world where we loose a lot green space, forests and parklands for housing and other constructions it is imperative now more than ever that we look after and nurture all of the above and also our lakes and Rivers to allow nature and wildlife to continue to thrive. I wholeheartedly object to the planning for a fuel depot so close to amazing lakes and River due to the high risk of contamination of fuel into the lakes and the

River. The area floods each year due to the close proximity of the River which even further increases the risk of fuel contamination which would be catastrophic to all aquatic life, birds and aquatic plants. The light and noise pollution is also another factor which would be completely unacceptable, along with an huge increase of traffic in the local area which would greatly impact the local residents. `
