COMMENTS:

Hello,

I am commenting for the first time on a planning application as I'm flabbergasted that it has even come to this. The application should have been thrown out before getting to this stage.

In a changing world driven by climate change, we all should be looking at what we can do to help reduce the impact of climate change. Fossil fuels have had a major impact on the environment already. The future isn't fossil fuels and this should be part of the discussion for this application. In 10 years time if this application gets approved what will happen to this site. Who will clear it up and remove it all?

The biggest concern for me, living in Thornbers way right next to the Charvil Meadows. It's that of flooding. The meadows flood every year and with a fuel depot next to it, it won't be long before more contamination from the depot to enter our already polluted rivers. This has to be the main reason this application cannot be approved.

The next concern for me is the impact to all the children around the roads in Twyford and Charvil. Adding tankers to the children's school routes when children are walking or cycling is an accident waiting to happen.

I would urge the committee looking into this to visit the primary and secondary schools of Twyford and Charvil, to ask the children's thoughts on this. As it's them it's going to impact the most, from an environmental impact and commuting to school impact.

There are many many more impacts which I'm aware of that have been raised by others, these are equally as important as the ones raised above.

I sincerely hope that this application is denied and the faith in humanity can be restored a bit more. Commercialism should never be above the environment.

Kind regards
