COMMENTS:

The proposal to develop a fuel storage depot with facilities for washing off vehicles which will drain into the River Loddon is totally unsuitable in terms of 1. Location - in the midst of parkland and on land which floods; 2. Access - access to the site is through minor country lanes; 3. Environment - in addition to the risk to the wildlife and community in the area, the suggestion that the runoff will flow into the Loddon which already struggles with Thames Water pollution is appalling.
