

This application is to replace and increase the size of the signal box for Pinewood Miniature Railway Club. The current signal box is showing signs of 'wear and tear' and a new signal box would not only make a more sound building its expansion will allow more than one person to be in the box at the same time. This is beneficial from the point of view of allowing easier training of new signal persons but also allow someone to work alongside a signal person from an additional safety point of view. The new signal box will also provide additional storage for equipment that can be used in the signal box which is held in other locations. The aim when building the signal box is to use a minimal amount of new materials, but source good secondhand materials thereby reducing the 'carbon footprint'
