

The area will be used for extra parking space, adding five extra parking spaces. The area is 154sq meters and will not cover the entire grassed area or change the existing treeline and shrubs on the A327 boundary.

We will be laying a grasscrete type product, which will allow for drainage. The area will then be re-seeded so that the grass will grow back through in this area. We will also be adding hedgerow along the length of the boundary between the car parking space and the immediate neighbours. The hedgerow will consist of Laurels and will cover six meters long to increase the biodiversity and provide privacy to their garden area.
