COMMENTS:

I agree with a lot of the comments made and object to the limited consultation period giving people limited time to respond. Whilst con-curring and supporting comments made I would also point out the effect on wildlife. The gardens and ponds on the south side of Langley Common Road are home to a large population of sparrows (which are endangered), newts including (great crested), frogs toads garss snakes and several other species of birds. This wildlife is part of Barkham square and indeed thrives because of the rural aspect. Developing this site would I feel have a significant effect on the wildlife and must be taken into consideration.
