COMMENTS:

The proposed roof increase at No. 26, I am concerned that this modification will significantly impact the light that enters my home.

Currently, we have three windows that provide natural light to our living space. An increase in the roof height of No. 26 will obstruct the sunlight reaching these windows, resulting in a dark living environment. This change would affect not only our quality of life but could also have implications for the overall ambiance of our property.

I kindly request you to take my concerns into account when considering this planning application. The preservation of light and space is essential for the well-being of residents, and any modifications that could adversely impact this should be evaluated thoroughly.
