COMMENTS:

Having looked at the plans, I have grave concerns about the infrastructure the roads, bridge, schools and shops that are proposed. As per previous plans the houses are built and then years later the proposed infrastructure is not fully completed as there are not enough funds available. Added to the high risk of flooding which no one seems to agree actually happens, then why are the underground reservoirs being built already before the plan has been accepted. The biggest challenge is the congestion that already occurs in Lower Earley, an extra 4000 cars, the bridge probably will never be built it will just make going to work and school an even longer trip.
