COMMENTS:

This should not go ahead at all. The roads are not designed for large HGVs and will cause huge problems for traffic as well as the conditions of the roads would be significantly damaged with the constant HGVs being driven on them. This would then lead to constant roadworks which are already a problem in these areas and more money being spent on this instead other priorities like updated facilities or shops. The site is also on a floodplain and near the local river and nature reserve. This is going to have a huge impact on the local wildlife which with the current state of affairs and with the regular news reports we are all receiving should be considered a top priority of preserving. If there were to be any problems on the site like an oil spill or a fire were to occur the impact on not only the wildlife but also the river would be devastating and would cause long lasting damage as well as spiralling costs.
