COMMENTS:

The reason for the objection. PP was approved to the design the architects had done. Then when building started, the design, was not built to what was submitted and incorrect building works had/have taken place. The front porch is not within keeping to the rest of the street, the rear extension is completely incorrect to the drawings, the roof design is wrong, Drainage for down pipes are in adequate and done incorrectly, with the amount of rain we have this will have an impact on the ground and can cause flooding, Clients can not apply for planning and then take it upon themselves to change the design, this is opening up a can of worms and leaving everyone in the area to do the same.
