COMMENTS:

I'm am logging this objection as a user of the country park, I can not see any viable reason why a fuel distribution depot next to a country park that is a water haven for a diverse range of wildlife, it would be all but impossible to completely limit the risk posed by such a facility, one mistake could lead to an ecological disaster, this

space is a quiet green area not just full of a diverse range of wildlife and plants but also a green space enjoyed by the local community and anglers alike. Putting an area like this at risk at anytime is a mistake but to even look at an application shows a complete disregard to common sense, this comes at a time when we are supposed to be creating more green spaces not putting the ones we have at risk.
