COMMENTS:

Having worked with HGVs and lectured on their pros and cons for many years, the level of water pollution from this site will be catastrophic. 1.2 Tonnes of CO2 into the atmosphere for every 500 litres of fuel burnt in the IC engines, grease filled wash down water rolling into the river, more hard ground reducing flooding protection. These are some of the issues that a site of this nature will bring to this semi rural area. I can't emphasise strongly enough what a disservice the council will be giving to our community if they allow this project to go ahead.
