

No work has yet been completed, performed or organised on this tree relating to this application, therefore no 'evidence' exists to disclose. On contacting the company that carried out the same work approximately 10 years ago (Parish Tree Surgery) we were asked to complete the TPO application process before progressing and confirming a date for the work to be performed.

The work will involve removing the foliage from the trunk (to reduce tree pollen entering our son's bedroom) and reducing the crown to prevent root encroachment under the house, bring light to us and the neighbours and reduce the significant bird droppings on parked cars and walkways. The intension is to reduce the crown by removing the small branches that have grown out since the last cut back, which will be a reduction of 1-2m.
