Proposed works to trees in a Conservation Area

T1 Beech: Located in the back garden.

This tree has a 'leggy' growth habit meaning that its form has stretched out undesirably perhaps due to insufficient light and/or insufficient pruning/shaping.

- Selectively reduce all round by approximately 2m to the nearest suitable growth point to produce a more compact form.
- Remove deadwood >40mm in diameter.

T2 Apple tree: Adjacent to T1.

This is on-going maintenance to maintain the trees dimensions and to encourage apple production.

- Reduce all round by approximately 2m back to previous pruning positions.
- Remove deadwood >25mm in diameter.

T1 Showing approximate reduction line.
