COMMENTS:

Further to my earlier comments, which I can't now seem to find, I'm not sure if I explained that with regards to the permission sought to take down the existing construction behind the garage and replace it with a brick built utility and study I believe this would affect the light to my dining room/ study. This is because the existing construction is built of glass and metal and so does not obstruct any light. However, this would not be the case with a brick built replacement.
