

For your second request the tree surgeon states:

- The future canopy height should be 5m – this is level with the eaves.
- Crown radius 3m reduction
- Tree height minimum 3m reduction (to reduce wind load and leverage to avoid uprooting in a storm). Might be worth asking for 4m

Perhaps worth noting that although the radius reduction looks severe on paper, it's mostly just thin stuff out wide and fairly low and the meat of the tree is within the proposed boundary so it would be at most 30% reduction (as stated in original application).
