Planning CONSULTATION RESPONSE – 253110 Brunninghams Farm Heath Ride

Thank you for consulting Berkshire Archaeology regarding the above application. Berkshire Archaeology is part of Reading Borough Council's Museum and Town Hall Services and provides historic environment advice to the five unitary authorities of Bracknell Forest Council, Reading Borough Council, Royal Borough of Windsor and Maidenhead, Slough Borough Council and Wokingham Borough Council. This response relates solely to buried archaeological heritage, the Council's Conservation Officer should be consulted for any matters relating to the historic built environment.

There are potential archaeological implications with this proposed development as demonstrated by Berkshire Archaeology's Historic Environment Record. The site lies within an area of archaeological potential, located c.180m north of the 'Devils Highway' Roman road. Although few investigations have taken place locally this should not be interpreted as an absence of potential. The area evidences extensive Prehistoric activity, with Neolithic arrowhead found c.630m to the north, Prehistoric lithics c.425m to southeast and to southwest near Church Farm, and c.600m to the south. A Bronze Age bell barrow lies just over 1km to the west, and there have been many findspots dated to Iron Age and Roman periods in the wider area.

Although this is not a largescale development, historic mapping suggests that the majority of the plot has never previously been developed and therefore any potential archaeology may remain undisturbed.

As shown, the application site falls within an area of archaeological significance and archaeological remains may be damaged by ground disturbance for the proposed development. It is therefore recommended that the following condition is applied, should permission be granted, in order to mitigate the impacts of development. This is in accordance with Paragraph 218 of the NPPF(2025) which states that local planning authorities should '*require developers to record and advance understanding of the significance of any heritage assets to be lost (wholly or in part) in a manner proportionate to their importance and the impact, and to make this evidence (and any archive generated) publicly accessible*'.

Condition:

A) No development shall take place/commence until a programme of archaeological work, including a Written Scheme of Investigation (WSI) has been submitted to, and approved by, the local planning authority in writing.

The WSI shall include an assessment of significance and research questions; and:

1. The programme and methodology of site investigation and recording
2. The programme for post investigation assessment
3. Provision to be made for analysis of the site investigation and recording

4. Provision to be made for publication and dissemination of the analysis and records of the site investigation
5. Provision to be made for archive deposition of the analysis and records of the site investigation
6. Nomination of a competent person or persons/organisation to undertake the works set out within the WSI.

B) The Development shall take place in accordance with the WSI approved under condition (A).

The development shall not be occupied until the site investigation and post investigation assessment has been completed in accordance with the programme set out in the WSI approved under condition (A) and the provision made for analysis, publication and dissemination of results and archive deposition has been secured.

Reason:

The site lies in an area of archaeological potential, particularly for, but not limited to, Prehistoric remains. The potential impacts of the development can be mitigated through a programme of archaeological work. This is in accordance with national and local plan policy.

The proposed development is for a small development, but will have ground impacts for building, utilities and landscaping. In view of the nature and scale of the development and the low likelihood of the potential archaeology, should it exist, meriting preservation in situ, field **evaluation** through **trial trenching** would represent an appropriate initial phase of work in order to determine the archaeological potential, levels of previous truncation, and the need for any further phases of work. This should be focused on the areas with the most ground impacts.

Berkshire Archaeology would be pleased to discuss the approach with the applicant, or their archaeological consultant, should permission be granted.

Linden Ellicott
Archaeology Officer
