COMMENTS:

I object to allowing general construction / demolition on the site until 2300hrs due to the proximity to residential areas. Noise pollution from the site during construction is incredibly disruptive to the residents as it is, it would be unacceptable for this noise to continue until 2300hrs.

I appreciate in the application they make specific mention to power floating the concrete floors. If this application is to be granted, it should only be granted for the specific purpose of the concrete floors and not general construction / demolition and all external sheathing's on the buildings should be in place prior to works starting to act as a sound barrier for the residents.
