Appendix 1	Site Location Plan (6178/301)
Appendix 2	Schedule of HGV Movements

1 Introduction

- 1.1** The proposed development is to construct additional capacity for the existing Packhouse at Heathlands Farm by adding an additional building, connected to the existing Packhouse, and using the existing vehicular access from Heathlands Road.
- 1.2** The existing Packhouse handles berries grown on the adjacent farm together with berries grown on other Hall Hunter Partnership farms at Sheeplands Farm, Tuesley and Eashing. Once packed, the berries are then distributed from Heathlands to customers, such as supermarkets etc.
- 1.3** A site location plan is attached at [Appendix 1](#). The majority of people working in the proposed Packhouse, particularly during the busy months, will live on the farm in existing mobile accommodation. They will not, therefore, create journey-to-work travel demands.

2 Traffic Generation

- 2.1** Traffic generation from the proposed development has been calculated based upon the expected increase in tonnage of berries, and the monthly distribution of the pattern of production passing through the Packhouse.
- 2.2** The schedule at [Appendix 2](#) shows the currently expected figures for 2025 tonnage through-put, month by month, followed by the 2027 expectations. The schedule shows the percentage change between those two years for each month. Berries are a seasonal crop and it is clear from the upper part of the table that the principal increase in through-put (percentage wise) is during the 3 months June, July, and August. On average, across those 3 months, the anticipated increase in tonnage amounts to 33%.

2.3 The lower part of the table converts tonnages to HGV movements, based upon 2027 through-put expectations. The pack house at Heathlands Farm handles the fruit grown at Heathlands Farm together with fruit brought in from the Hall Hunter Partnership Farms elsewhere. Those HGV movements are then compared with current (2024) HGV movements, taken from CCTV records. Finally, the bottom part of the table compares the 2024 HGV data with the projected 2027 HGV movements on a month by month basis.

2.4 It is clear that outside the peak summer period, the number of HGV movements will show little change. During the peak months, June-August (inclusive) there are more significant increases expected. Over those 3 months the total increase in HGV traffic is 848 movements, equal to approximately 10 movements per day, or, say, one HGV movement per hour. That is an increase of 20% on the existing HGV movements per day over those peak 3 months, but it is evident that the resulting increase is a very small number.

3 Site Access

3.1 Access to the proposed development will be via the existing private farm access road, used by all HGVs to and from the farm. This is some 450m in length between the Packhouse and its junction on to Heathlands Road. The majority of the access road is straight and some 3.5m in width but with passing places at the one third points. The junction on to Heathlands Road is two lanes wide with generous corner radii and good visibility in both directions. All HGVs leaving the farm are directed (by signs) to turn left on to Heathlands Road following which they will join the main highway network half a mile to the south at the traffic signal controlled junction on to B3430, Nine Mile Ride.

3.2 Heathlands Road is straight in both directions from the farm access, and it is contained within a 50mph speed limit. Crashmap data shows that in the last 5 years there have been no personal injury accidents at the farm access road junction on to Heathlands Road, or on Heathlands Road itself.

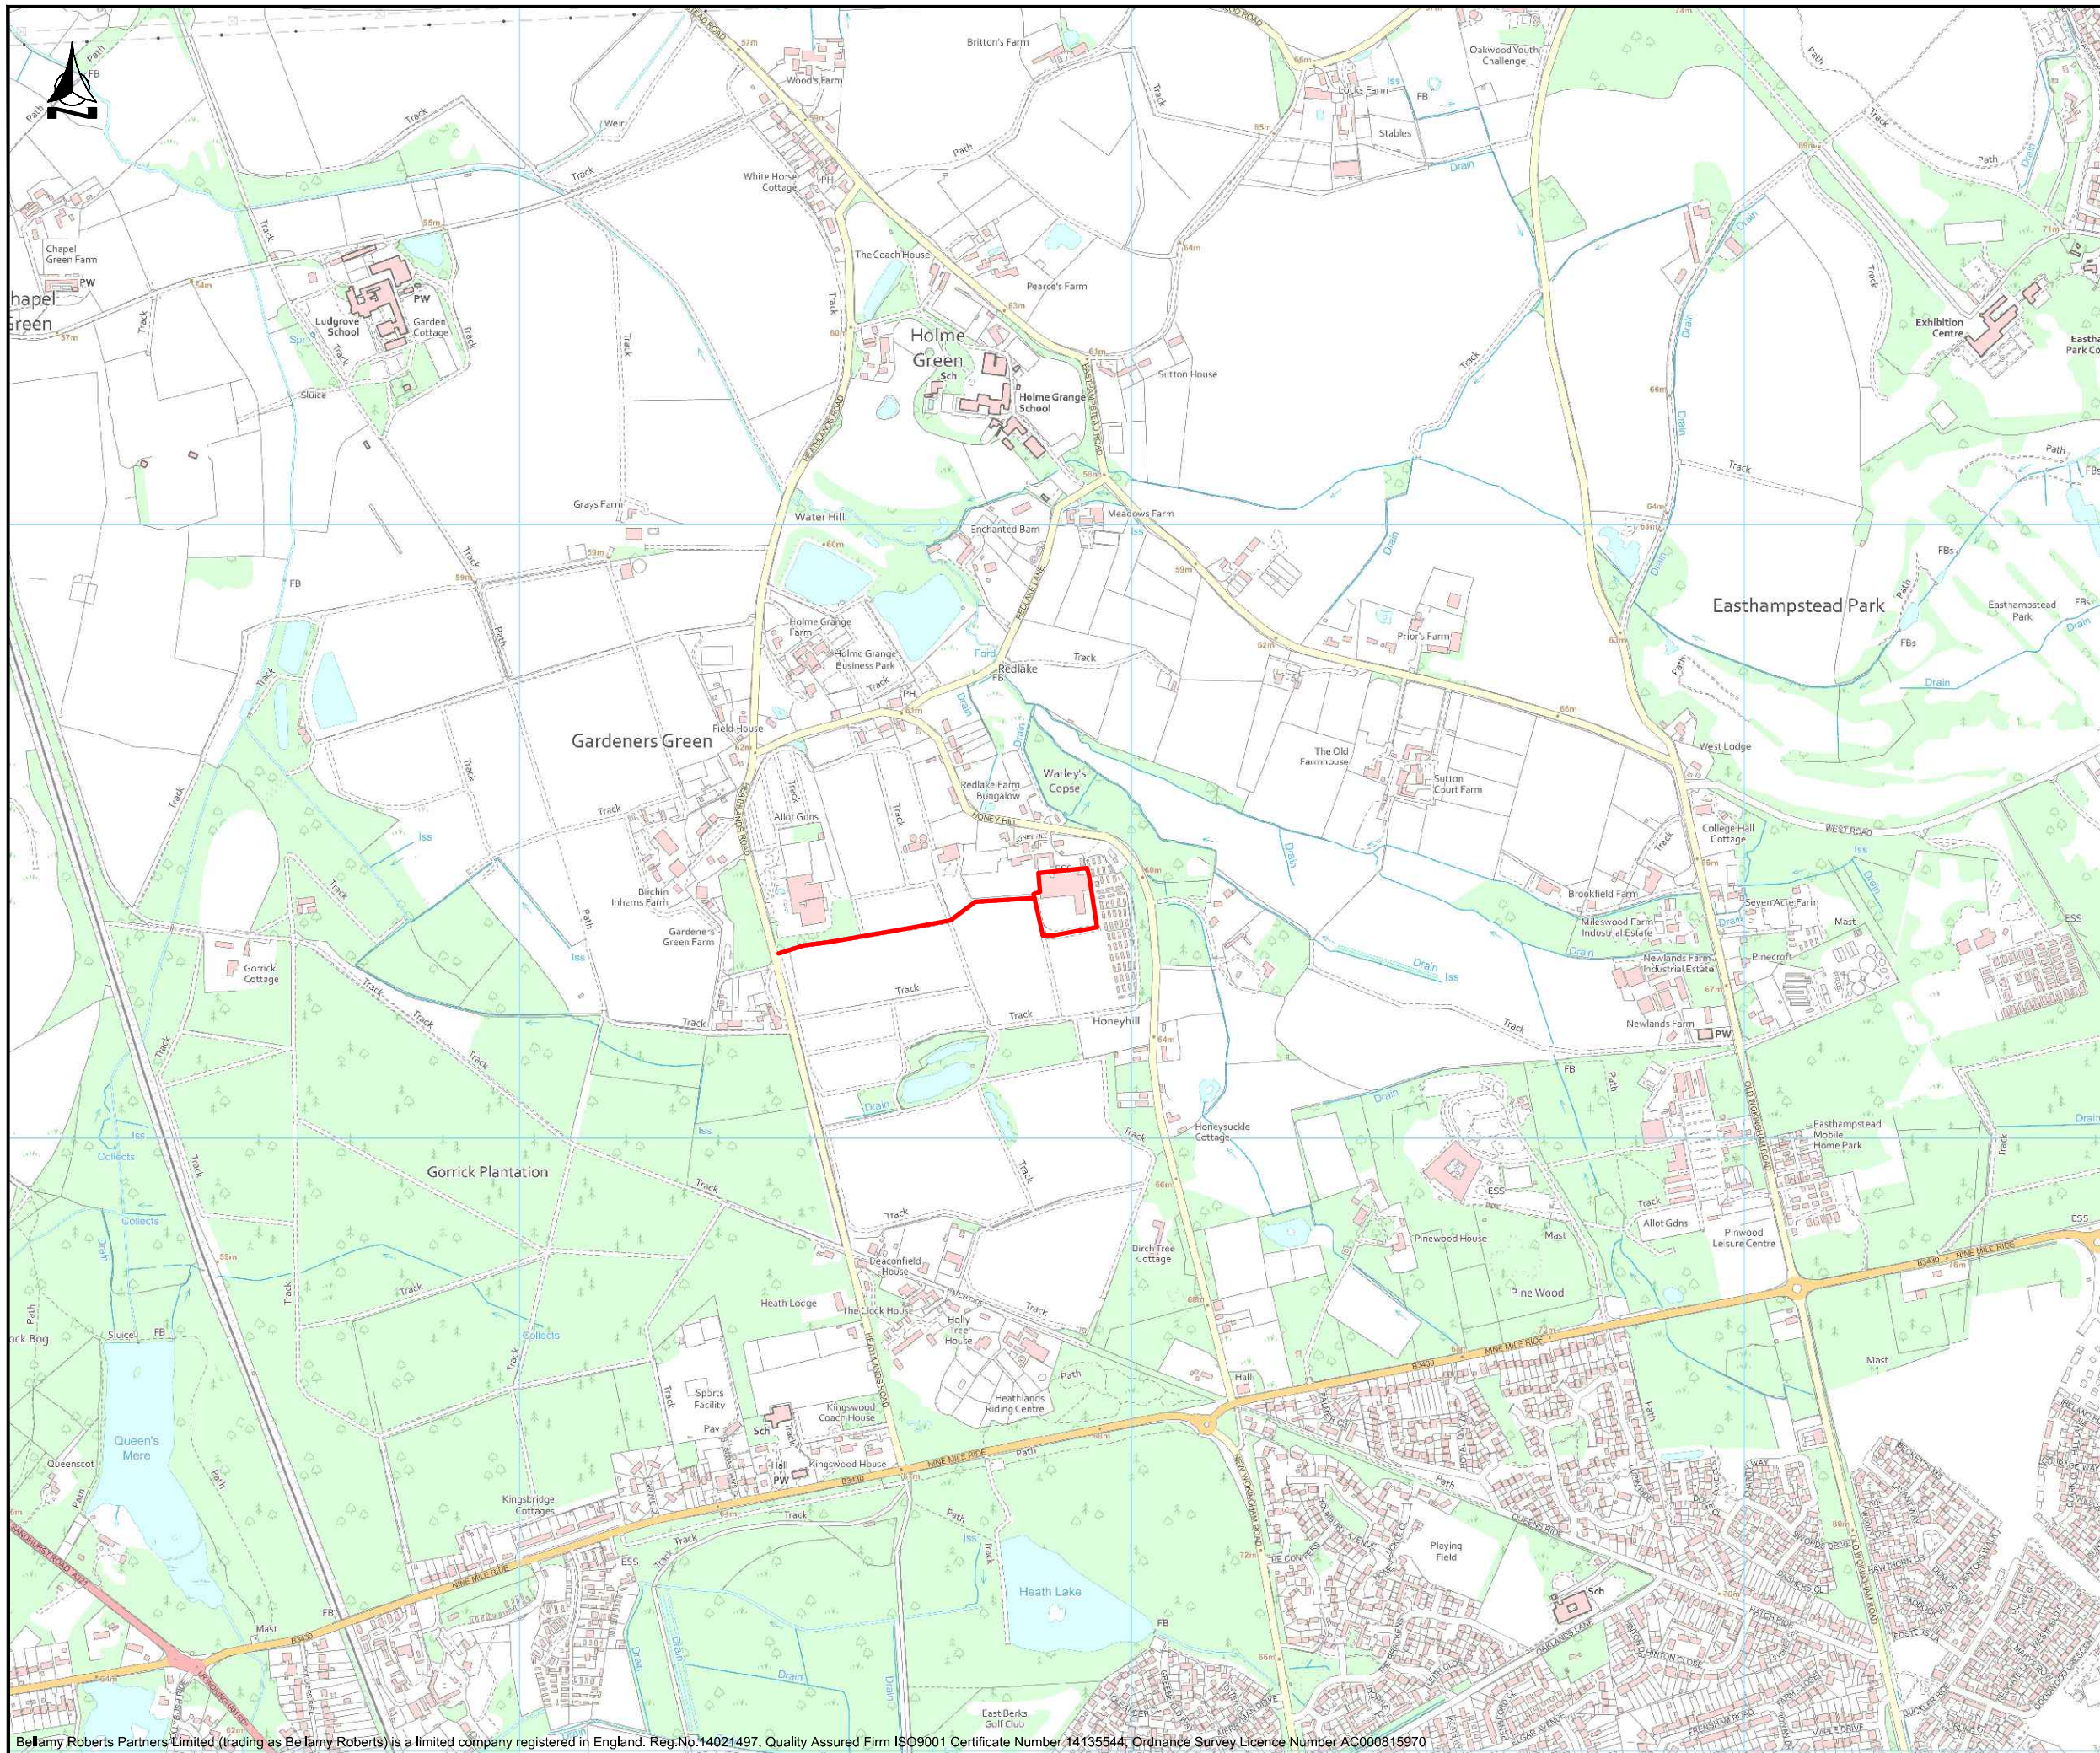

4 Summary

- 4.1** The existing pack house at Heathlands Farm packs and distributes fruit grown on Hall Hunter Partnership farms. This application seeks to increase the capacity of the Packhouse to accommodate anticipated demand from all of the group's farms. The majority of employees working on site during the peak summer months will live on site in mobile accommodation and will not therefore create journey-to-work demands.
- 4.2** Details of the anticipated increase in demand are set out in this Transport Statement and indicate that at the busiest time of year (June-August inclusive) the current Packhouse generates approximately 50 HGV movements per day. Additional capacity will generate a further 10 HGV movements per day, equivalent to just one additional movement per hour. Outside these 3 peak summer months, existing HGV traffic movements are relatively low and the increase as a result of the proposed expansion will reduce proportionately, and be of no significance.
- 4.3** Access to and from the Packhouse for HGVs is via a private farm road with a junction on to Heathlands Road. That junction has generous radii and good sight lines in both directions. All HGVs are directed to turn to and from the south at the Heathlands Road junction and to join the main highway network at the B3430 Nine Mile Ride traffic signals. The addition of approximately one more HGV traffic movement per hour at the busiest times of year will not give rise to any materially adverse traffic impact.
