COMMENTS:

My mother and father-in-law live on Nine Mile Ride. When I visit them, I regularly use Range Road for exercise - either walking or running - because it is a quiet, safe, rural road set back from the busy main road. I enjoy being amongst the trees and wildlife.

The formation of the pitch (including formation of a new vehicular and associated parking) will inevitably encourage greater car usage which would make the road no longer safe to exercise.

The felling of trees (which has already been done by the applicant despite the sit being within the Thames Basin Heaths Special Protection Area), and the installation of caravans will fundamentally alter the visual character of the road. The construction and

artificial light will have a detrimental impact on many species including protected bats, hedgehogs and others.

Approval of this application may set a precedent for further applications for a gypsy / traveller pitch along the lane, leading to even more vehicle movement and traffic flow and having a further detrimental impact on the local wildlife.

With limited green, safe and vehicle free spaces immediately accessible from Nine Mile Ride, I will not be able to exercise if the land is used to provide one gypsy/traveller pitch.
