To whom it may concern

Ref: Proposed tree work at Kingsbridge Cottage

T1 Quercus robur – remove major deadwood and carry out aerial inspection

T1 - a mature, open grown oak tree on the corner of Lambs Lane and Kingsbridge Hill that is growing adjacent to The Cottage at Kingsbridge House. The Cottage is currently undergoing renovation and there is concern that the crown of the oak tree is holding a significant amount of major deadwood (more than 75mm diameter) over a high target area, in particular over the roof of the Cottage. The tree generally appears in good health considering the proximity of the buildings and roads, and the amount of deadwood appears normal for an oak tree of that age and crown spread, and is consistent with a gradual transfer of dynamic mass to static mass within the crown of the tree as part of the natural retrenchment process. The proposal is to remove all major deadwood and carry out an aerial inspection.
