

Biodiversity Enhancements

A bat box will be installed beneath the eaves of the house on its south facing wall at around 4 meters above the ground floor level of the house (nb ground floor level refers to the middle floor of the 3 floors, not the basement). Care will be taken with placement to ensure that there is minimal obstruction preventing a clear flight in to the box.

A bird box will be attached to each of the two sycamore trees. These will be north east facing and 2-4 meters from the ground. Care will be taken with placement to ensure that they are positioned to allow easy access for birds, not covered with foliage and are inaccessible to potential predators.

Hedgehog gaps of c 13cm x 13cm will be made at the base of the fences used to subdivide the land at intervals of at least one every 10 meters of fence length.
