COMMENTS:

I object strongly to this planning proposal as not only will this impact me personally but also for all the residents of this village.

With planned building very close to my house, the new houses will block not only my view but (more importantly) my light/solar panels. There is a diverse variety of wildlife in the proposed area including bats and stag beetles which will be eliminated in the building work.

The village itself cannot cope with the increase in residents. Already the roads are over capacity and traffic has become a severe problem at peak times. Our network of roads could not cope with any more traffic, especially as we are within the AWE evacuation zone, evacuation would become impossible.

The village has already had a huge amount of building work and houses over the past decade, which has increased flooding in and around the village. This poses a risk to not only wildlife but residents also as standing water is a breeding ground for dangerous bacteria.

Endangering not only our animals but our children too.

These are only a handful of the many many issues that this proposal will cause for the residents, wildlife and environment.
