Dear Debbie

After visiting site, I suggest that we crown raise group trees T1-T3 to 3m to facilitate parking vehicles. T4 a willow located at entrance to Queens Ride, crown raise to 5.2m to ensure safe passage of vehicles. The trees on left side of Queens Ride, from gated entrance to large Oak at the end of the driveway, crown raise to 5.2m for safe passage of vehicles. I also suggest that all the trees listed above receive a deadwood (above 50mm in diameter)

There are 3 light columns that need lateral branches removing to create 0.5m clearance and remove any deadwood above 50mm in diameter

Kind Regards

Jack Hillebrandt
