Bat Tube 1FR

Bat Tube 1FR

for installation in walls

The tube is designed as a Bat summer roost for bricking-into the external walls of buildings. Due to its small size it is also very suitable for installing in the thermal insulation. The characteristic behavioural needs of building species have been incorporated in the tube principle. A wooden panel on the inside with long-term resistant animals can cling onto the wooden side or the opposite panel (made of breathable wood-concrete). This Bat Tube is maintenance-free, as the droppings can fall slowly downwards, via the special droppings chute.

Installation: Install in façades (brick-in or render-in), in concrete (for example, in bridge structures), or retro fitting during renovation work, etc.

Material: open-pored, breathable SCHWEGLER wood-concrete.

Colour: 1FR is delivered in "natural grey". It can be painted at any time with standard breathable façade paint.

Miscellaneous: If bats get inside the building, we recommend the 2FR model.

Entrance: W 15 x H 9 x D 2 cm.

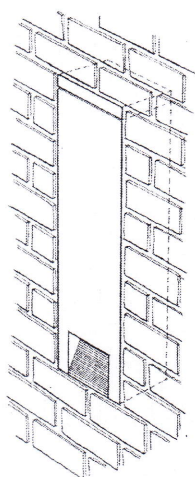

External dimensions: W 20 x H 47.5 x D 12.5 cm.

Weight: approx. 9.8 kg.

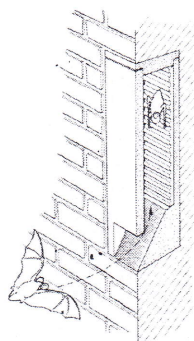

Includes: Bat Tube 1FR.

Bestellnummer: 00 750/6
