COMMENTS:

This planning application creates a huge number of housing. But the road access is not provided sufficiently. Currently the Lower Earley Way is bumper to bumper both morning and evening rush hour. It backs up to Blackboy Roundabout and the roundabout comes to a standstill with cars blocking entrance/exit to the roundabout as it is. Adding all these houses will mean more people using vehicles to get to J11 and elsewhere. As it is we currently cannot cope with the traffic. It is all good to say we put bus and cyclelane but in reality when it is raining (that is most days) or it is cold people use thier cars. How will this cope with existing road infrastructure. I went to a session at the University of Reading where they explained proposals. Widening tiny part of the road towards J11 is not going to help the massive number of cars this development will add to the area. There are hardly any dentists taking NHS patients. We struggle to get a GP appointment. How are these going to be addressed? I object to this application
