COMMENTS:

The proposed development should be rejected outright. Introducing a project that guarantees increased traffic congestion, amplified noise pollution, and a heightened risk of flooding is fundamentally irresponsible. Our community already suffers from inadequate infrastructure, and this development would exacerbate existing problems. Moreover, the argument that such facilities are necessary is specious; comparable amenities are readily available in all neighboring towns, eliminating any genuine need for duplication and the associated environmental damage.

Further compounding the issue are the severe access problems this project would create. The narrow roads and limited public transportation options in the area are ill-equipped to handle the anticipated surge in traffic. Emergency services would face significant delays, potentially endangering lives. The inevitable disruption to daily routines, coupled with the degradation of our quality of life, far outweighs any perceived benefits. Prioritizing short-term gains at the expense of long-term community well-being is a reckless and unsustainable approach.
