COMMENTS:

I have read the noise Impact control report from Sand Martins and would like to highlight the following points/issues arising from it

Below is a section copied from the report

It is understood the proposed operational times are 07:00-18:00

7.6 In discussion with the greenkeeping operational staff it is understood that the worst-case hour daytime activities are likely to be as follows:

- All mobile greenkeeping machinery starting up and leaving the compound in the morning
- Noise breakout from grinding machines in grinding
- Noise breakout from airgun in equipment store
- Noise from external jet wash in compound

Which would mean that every day of the week, and weekends we would be subject to hearing the shutters open, the machinery start up, and any other machinery that is needed from 7AM!!! I stood in my garden yesterday and measured the noise coming from just one piece of equipment with a dB counter and it went up to 81dB! And on a typical morning they start up @3 pieces of machinery at the beginning of their shifts.

Within this report they have only mentioned one neighbour close enough of whom noise generated is a concern. This is not the case, the map in the report is not to scale and will be of equal distance from 'The

Lodge' The position of the building and its direction would serve as a sound barrier for 'The Myrtles' but not for 'The Lodge' We would therefore ask that a later start time is considered, as is the case with garages and other commercial B2 buildings in residential areas.
