COMMENTS:

Many habitats will disappear and ancient roosting sites

I have seen newts in the wetlands and the area is a flood plain for runoff water

Langley Mead was developed for the community and it should be preserved as it is not surrounded by housing squeezing wildlife
More concrete areas not only destroy habitats but increase the risk of flooding making the areas left for walking possibly flooded in winter

Areas to build should be infill not fields

A serious environmental survey must be commissioned by a completely independent body to ensure these precious spaces are not lost forever to future generation of Shinfield residents

I have walked this land for my whole life and my ancestors before me it is a public space that has existed for generations and should be preserved for future generations it is rich in wildlife and birds
