

The only tagged trees are ones with possible bat roosts so the contractors know what features there are to be retained with the tag number and the description print out.

All tagged trees will be reduced to monoliths, retaining the possible bat roost features with the exception of 433 which is next to the rear entrance of Waingels college/Waingels Road and might be removed on the grounds of public safety.

Any ash which has 40% crown decay within the area of ash due to *Hymenoscyphus fraxineus* will be felled.

All standing ash which are left will be tagged and monitored once a year (July-Aug) to assess the die back and felled if the trees reach 40% crown die back.

Significant replanting has been carried out over the past 20 years in anticipation of this event. Further re planting will take place in accordance with the Forestry Commission felling licence
