

External Lighting Scheme

Please refer to drawing entitled 'Lighting Plan (Outdoor)'

The lights used in this scheme are all PIR triggered fixed downlights with 5W LED bulbs with maximum 2700K colour temperature (warm white) light. They will be attached at heights between 1500mm and 1800mm above ground level. They will remain alight for no more than 60 seconds after movement is no longer detected.

As shown on the drawing, there will be a light to the side of the front door, and one to the side of the side door. There will also be a total of 4 lights on the driveway and parking area.

The lights used will be similar in appearance to the image below.
