ADD TO BASKET

ECO-FLAP® N is a flap valve with integral spigot especially designed to prevent backflow into sewers and protect properties against flooding.

The **ECO-FLAP® N** flap valve is recommended for properties located close to waterways and bodies of water (streams, rivers, embankments, ponds ...) where the surface water is directly discharged through an outfall into the watercourse.

It prevents the water from rising up through the sewer (heavy rain, storms or floods) and causing flooding..

Available in **DN 100, 110, 125, 160 and 200**, the valve is comprised of:

a recyclable 20% glass fibre reinforced Polyamide body (PA6-20FCV)

a recyclable 30% glass-ball reinforced PPH door

a TPE lip seal over-moulded on the door to guarantee a seal at a low level of back pressure

an over-moulded TPE pipe sleeve seal

Thanks to its material, the **ECO-FLAP® N** flap valve offers good resistance against corrosion and ultraviolet degradation. Also due to its low weight it has a low operating head.

ECO-FLAP® N can withstand back pressures of **1 bar or 10m head**.

Customers who bought this item also bought:

**110mm 45° Single Socket Bend**
£2.60[CONTINUE SHOPPING](#)**110mm Non Return Valve (single flap)**
