Re: Silver birch at 37 Chestnut Avenue, RG41 3HW

Hi David,

With reference to my site visit today regarding the Silver Birch tree, the tree has developed die back in the upper canopy, lost all its foliage mid summer & has fungus on the main stem & buttress roots. This is justification for the trees removal,

Kind regards,
Scott

Scott, many thanks for your visit and advice.

For the purposes of my application for works to a tree under a TPO are you able to send me an e-mail indicating that from a visual inspection in your professional opinion this tree is in terminal decay?

Many thanks
David Hunter
