Identification of Tree(s) and Description of Works ?

Please identify the tree(s) and provide a full and clear specification of the works you want to carry out * Required

T1. Purple Plum - Positioned along the fence line - Tree is leaning over the fence from Drey House - The lower section of the canopy is directly over the parking spaces, with branches hanging quite low and is restricting access, posing a significant health and safety issue as it is within striking distance to pedestrian head height and or vehicular height. It is also restricting access for high-sided vehicles. We are therefore recommending a small crown lift to approximately 2.5m to provide a safe and suitable clearance gap between the tree's canopy and the parking spaces. By carrying out this work, we believe it will reduce the health and safety issues the tree currently poses, but will also allow the tree to continue to grow and thrive.

T2. Willow - The tree is rooted on the Drey House side of the fence line, and is positioned next to the Copper Beech building. The canopy of this tree is growing over the fence line and is covering the CCTV camera, with branches overextending and touching the Copper Beech Place building, both of which pose significant health and safety issues. We are therefore recommending a crown reduction, cutting back approximately 3m from the tips to clear the building and reduce the canopy away from the CCTV camera. By carrying out this work, we believe it will reduce the health and safety issues the tree currently poses, but will also allow the tree to continue to grow and thrive.

Kindest regards,

Jules
