COMMENTS:

The proposal for a fuel storage facility on this site is completely unacceptable. This facility borders a protected nature area, once gravel pits, where any leakage could contaminate nearby lakes and wildlife-rich land. Worse, the site lies in a floodplain, which would only worsen the environmental risk.

The access road is far too narrow for the heavy traffic it would bring, including articulated lorries. This will not only cause severe congestion but will also damage local roads. There's already existing traffic chaos due to the nearby tyre company.

Traffic will make Charvil Road up to Bath Road a dangerous route for pedestrians, particularly children. This village is meant to be residential, not an industrial hub.

This development threatens both our environment and our community. Please reject this proposal and protect our future.
